Introduction to Backup

What is the Backup addon?

Soffid allows you to add a backup addon to the console to save a snapshot for each user to keep track of changes as they occur.

Main Menu > Administration > Configuration > Global Settings > User backup configure & restore

On the **User backup configure & restore** page you could manage the user snapshots and configure the backup.

- To configure the backup you need to configure some parameters
- To restore user data for a specific date, you only need to select the proper record and click the restore button.

> The user's snapshot will be available on the User page as well. There you could manage the user backup data.
