

---

# End

## Description

The end step finalizes the process. It is the last step of the workflow.

## Steps Tabs

### Task details

This process type does not have task details for the start step.

## Incoming transitions

The Incoming transitions tab displays the previous steps where the flow comes from. When you create a process from a template or from scratch default incoming transitions are defined. It is allowed to customize the default setup, add new transitions, or delete transitions.

- **From:** the previous step, where the flow comes. Allows you to select where the workflow comes from.
- **Incoming transition:** brief name to identify the transition. That is the name of the action the form will show to the final user.
- **To:** current step.
- **Action:** allows creating a custom script to perform specific actions.

When you create an incoming transition, Soffid creates the proper outgoing transition.

## Example

If the user country is Spain, it will perform an action for each role.

```
userName = executionContext.getVariable("userName");  
user = serviceLocator.getUserService().findUserByUserName(userName);
```

```
country = user.getAttributes().get("country");

if (country != null && country.equals("ES")) {
    roleList = serviceLocator.getApplicationService().findRolesByUserName(userName);
    for (role : roleList) {
        //TO-DO
    }
}
```

## Outgoing transitions

This step does not have outgoing transitions. It is the last step of the workflow.
