Access Management & SSO

- Create identities (manually, CSV file, or authoritative source)
- Add applications
- Create MFA policies
- Create adaptive authentication rules

Create identities (manually, CSV file, or authoritative source)

Description

You need to register the identities to manage and protect them. This wizard allows you to choose the easiest way to do it.

Step-by-step

1. First, you must select one option to register the identities. Soffid allows you three options.

Load identities

You need to register the identities to manage and protect. Here you have some ways to do it:

- ☐ Load from a CSV file
- ☐ Configure an authoritative data source to always have up-to-date information
- ☐ Register them manually

← Undo

Next

2. You must follow the steps, depending on the selected option:

2.1. Load from a CSV file: this option allows you to load identities from a CSV file.

2.1.1. First of all, you need to pick up the CSV file.

2.1.2. Second, Soffid will display the file data to check contents

Import

Pick a file

Check contents

Select mappings for each CSV file column

Finish

Character set :

UTF-8

Separator :

,

Quote character :

"

Escape character :

\

Contains header row :

Yes

Reload

Picture	User...	Full ...	Prim...	Ena...	Birth...	First ...	Last ...	Mid...	Type
	rfranklin	Rosalind Franklin	scientist	Si		Rosalind	Franklin		I
	aeinstein	Albert Einstein	scientist	Si		Albert	Einstein		I

Back

Next

2.1.3. Then you must select the proper mapping for each CSV file column. And finally, click the Import Button and Soffid will add the identities to the platform.

Import

Pick a file

Check contents

Select mappings for each CSV file column

Finish

Select mappings for each CSV file column

CSV column	Target object attribute
Picture	Don't load

Add applications

Description

This wizard allows you to add a new Service Provider, that is, to configure an application that relies on an Identity Provider (IdP) to authenticate users and provide access to its services.

To be able to add new applications (SP), you must install the Federation Addon.

Step-by-step

1. If you have not previously installed the Federation Addon, the first time you select the *Add application* option, Soffid will require to **install the Federation Addon**.

When you click the OK button, Soffid will browse to the Soffid Download Area where you can find the Federation Addon. To install Federation Addon you can follow the steps [How to install Federation in Soffid?](#)

2. Once you select the *Add application* option, Soffid will display the wizard to register the Identity Provider, if it does not exist previously.

Add applications

Register identity provider

Select application

Configure application

Configure Soffid

Finish

First, you need to configure the Soffid identity provider. It must have a public DNS Name, and should be reachable from the Internet.

Host name :

iam-sync-35.soffidnet

HTTPS port :

443

← Undo

→ Next

3. You must select the application you want to add.

3.2. AWS app:

3.2.1 Soffid will download the proper certificate.

3.2.2 Once, you download the certificate, Soffid will display the Configure application step. You must follow the indicated steps at this point and click the Next button.

Please, follow the next steps:

- 1: Save the certificate that is being downloaded from Soffid wizard
- 2: Enter int to your [AWS IAM platform](#)
- 3: Enable **IAM Identity center**, if it is not enabled yet
- 4: Click on **Choose your identity source**
- 5: Click on **Change identity source** and select **External identity provider**
- 6: Enter the following IdP sign-in URL: <https://gbr.idp.demo.soffid.net:443/profile/SAML2/Redirect/SSO> 
- 7: Enter the following IdP issuer URL: <http://idp.demo.soffid.net/gbr> 
- 8: Click on the **Choose file** button to upload the **IdP certificate**, and upload the certificate previously loaded from Soffid wizard
- 9: Click on **Download metadata file** button in the Service provider metadata box, save it for the next step
- 10: Click on the **Next** button, in the right bottom corner of the AWS page.
- 11: Type in **ACCEPT** and click on **Change identity source**
- 12: Optionally, click on the button to **Enable** Automatic provisioning

When finished, click on the Next button below and upload the metadata file you have just downloaded.

3.2.2 Then, you must upload the metadata of your service provider and click the Finish button.

Create MFA policies

Description

This wizard will help you to configure multi-factor authentication in order to expand security. This process requires users to provide two or more forms of identification before being granted access to a system or application.

For more information, you can visit [the Two-factor authentication \(2FA\) book](#).

Step-by-step

1. If you have not previously installed the Federation Addon, the first time you select the *Create MFA policies* option, Soffid will require to **install the Federation and the OTP Addons**.

2. First, you must select the authentication factor to use

Enable multi-factor authentication

Select OTP type

Delivery method

Activation

Finish

Select the strong authentication factor type to use

- ☐ Email
- ☐ SMS
- ☐ Time-based HMAC OTP
- ☐ Event-based HMAC OTP
- ☐ Security PIN
- ☐ Certificate
- ☐ FIDO Token

← Undo

→ Next

3. Second, you must select the delivery method to use. If you select the second option, you have to select the users to whom the instructions will be sent.

Enable multi-factor authentication

Select OTP type

Delivery method

Activation

Finish

Select the desired method to provision the strong authentication factor.

- ☐ Send instructions by email to everyone
- ☐ Send instructions by email to some selected users
- ☐ Do not send it yet

Email message :

Dear \${fullName},

Please, follow this [link](#) to register your authentication email address.
It will be used by Soffid to verify your identity.

Sincerely yours, Gabriel Buades

← Undo

→ Next

4. Next, you must select which users will have the second authentication factor activated.

Enable multi-factor authentication

Select OTP type

Delivery method

Activation

Finish

Select which users will be required to use its second authentication factor

- ☐ Everyone
- ☐ Only users that have completed the enrollment process.
- ☐ No one yet

← Undo

→ Next

5. Finally, the changes will be applied and the process will be finished.

Enable multi-factor authentication

Select OTP type

Delivery method

Activation

Finish

Applying changes

✓ Finish

Create adaptive authentication rules

Description

Adaptive authentication rules are a set of security policies and mechanisms that adjust authentication requirements. These rules determine the strength of authentication required for each user, based on factors such as their location, device, past login behavior, and other risk indicators.

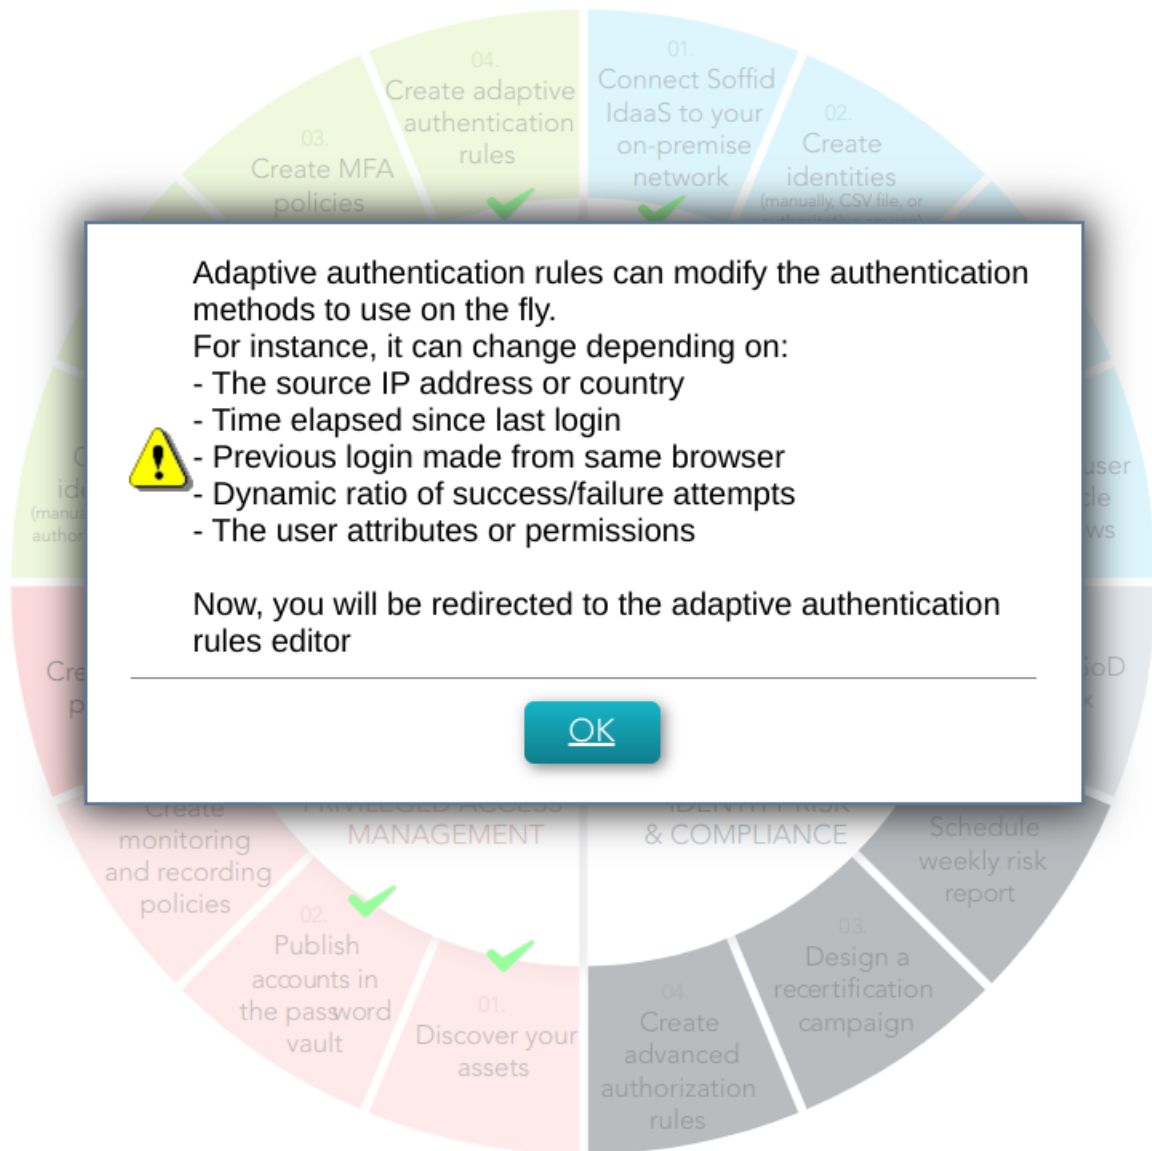

For more information, you can visit the [Condition for Adaptive authentication page](#).

Step-by-step

1. If you have not previously installed the Federation Addon, the first time you select the *Create MFA policies* option, Soffid will require to **install the Federation and the OTP Addons**.

2. You must select the *Create adaptive authentication rules* and then click the Ok button.

3. Then, Soffid will browse to the Adaptive authentication window, where you could configure it
