

Create adaptive authentication rules

Description

Adaptive authentication rules are a set of security policies and mechanisms that adjust authentication requirements. These rules determine the strength of authentication required for each user, based on factors such as their location, device, past login behavior, and other risk indicators.

For more information, you can visit the [Condition for Adaptive authentication page](#).

Step-by-step

1. If you have not previously installed the Federation Addon, the first time you select the *Create MFA policies* option, Soffid will require to **install the Federation and the OTP Addons**.

2. You must select the *Create adaptive authentication rules* and then click the Ok button.

3. Then, Soffid will browse to the Adaptive authentication window, where you could configure it

Adaptive authentication

Description : Brute force Attack

Condition : failuresRatio > 0.8

Always ask for credentials : No
