How to configure the Office 365 agent?

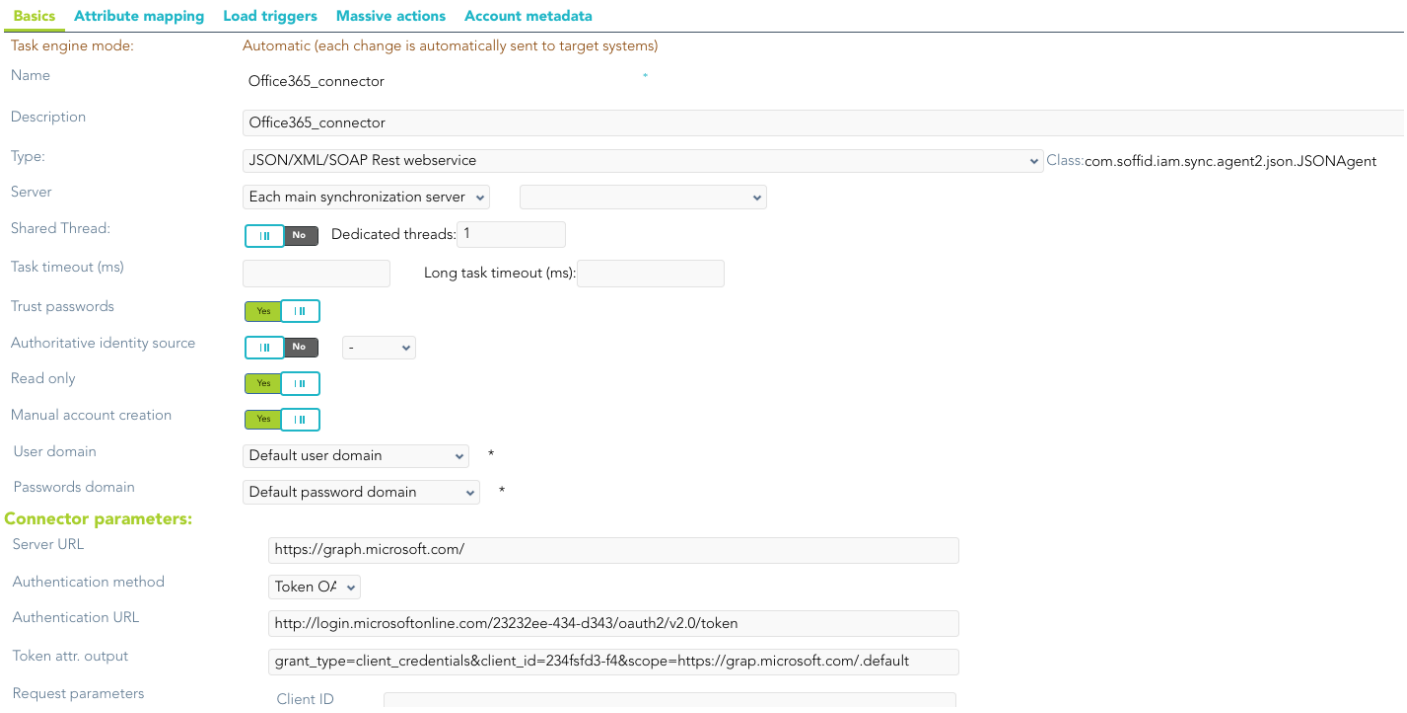

Office 365 integration

Prerequisites

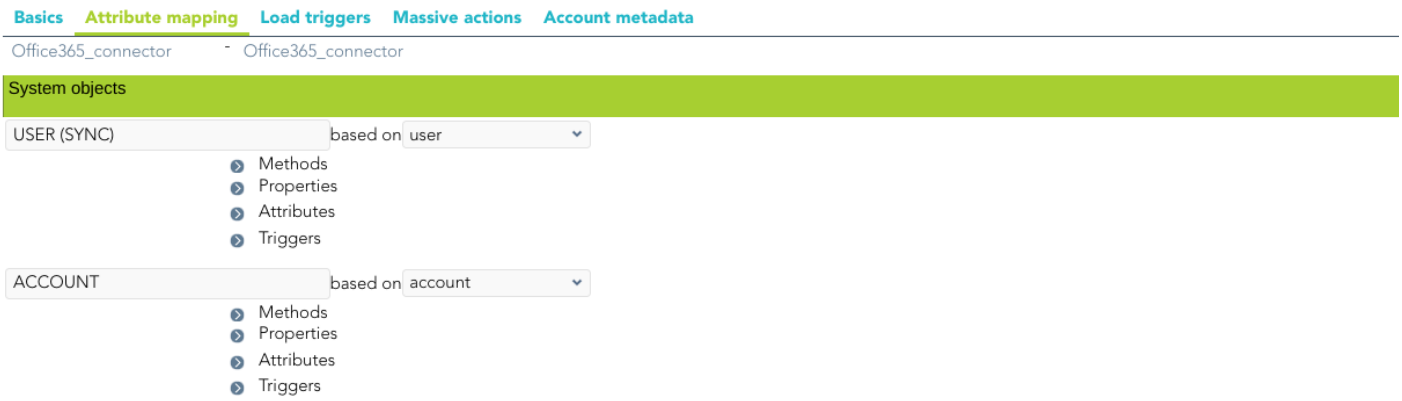

- You need to install the last version of JSON Rest Connector

Configuration

Configure the Basic data to establish the connection

Then, configure the attribute mappings

> Soffid provides you versions of the attribute mappings to import into the agent configuration:

- *Basic* attribute mappings: agent-config-Office365-Basic.xml
- Attribute mappings with *immutable ID and Azure groups*: agent-config-Office365-MoreComplex.xml
