7. Collection class

Introduction

The collection object implements a subset of the standard DOM HTMLCollection

Attributes

length	Long	Number of items in collection.

Methods

item	id: long returns Element	Find the element with id order number. The first element is 0.
namedItem	id: string returns Element	Search for an item with the given name. First search an element with matching Id attribute. If none is found, search for an element with matching Name attribute.
