Create tasks

Each time an extensible object is created or modified, a new synchronization task should be created:

```
void generateTask(ClearanceEntity entity)
{
    TaskEntity task = getTaskEntityDao().newTaskEntity();
    task.setTransaction(TaskHandler.UPDATE_EXT_OBJECT);
    task.setPrimaryKeyValue(entity.getId());
    task.setCustomObjectType("clearance");
    getTaskEntityDao().create(task);
}
```
