
Register extensible object

Create a service that extends `ApplicationBootService`

In the methods `syncServerBoot` and `consoleBoot`, you should register it using the following code:

```
ExtensibleObjectRegister eo = new ExtensibleObjectRegister();
eo.setName("clearance");
eo.setDescription("e-Clearance object");
eo.setClassName("com. soffid. addon. test. ClearanceExtensibleObject");
getAdditionalDataService().registerExtensibleObject (eo);
```
