WS-Fed

“ WS-Federation (Web Services Federation) is an Identity Federation specification

WS-Federation defines mechanisms for allowing different security realms to broker information on identities, identity attributes and authentication. WS-Federation focuses on federated identity and trusting authentication tokens across different realms, privileged password management is concerned with the security, control, and audit of high-risk account passwords within an IT environment

WS-Fed will only be used with **Exchange** and a few other applications.

WS-Fed Example

Steps

Attribute definition

First of all, will be mandatory to create two new attributes

- User principal name
- AD SID

sofid

Configure Exchange

Finally, you must configure the Exchange.

- 1.- Upload the SAML certificate to the certificate repository
- 2.- Search for the thumbprint of the certificate:

```
Set-Location Cert:\LocalMachine\Root; Get-ChildItem | Sort-Object Subject
```

Administrator: Windows PowerShell

```

PS Cert:\LocalMachine\Root> Set-Location Cert:\LocalMachine\Root; Get-ChildItem | Sort-Object Subject

PSParentPath: Microsoft.PowerShell.Security\Certificate::LocalMachine\Root

Thumbprint                               Subject
