Change Password URL

There is a service point to allow users change their passwords. Simply redirect the user to:

```
https://<YOUR_SYNCSERVER_HOSTNAME>:1443/protected/passwordChange
```

For instance: https://iam-sync-idp.soffidnet:1443/protected/passwordChange

Image

The user will be required to enter identify itself and enter a new password. Optionally, you can enter a web page to return after password change is complete:

https://**servername:port**/protected/changePassword?return=**URL**
