

# Connecting CAS client

## Introduction

The CAS protocol is a simple and powerful ticket-based protocol. It involves one or many clients and one server. Clients are embedded in CASified applications (called “CAS services”) whereas the CAS server is a standalone component.

## Register CAS client

1. Open the **Identity & Service Provider** page.

Main Menu > Administration > Configure Soffid > Web SSO > Identity & Service providers

2. To add a new service provider, click on the **Add Service Provider** button.

Be in mind that you can configure more than one Entity Group and you could add new service providers in each one.

3. Then you must fill in the required fields. Also, you need to provide the identity provider metadata. You can either copy it from the Soffid federation page or instruct the service provider to download the federation metadata by itself.

### Identification

Type : CAS client  
publicID : http://127.0.1.1/  
Name : CAS client

### Login rules

Allow impersonations :  
UID Script : Script to compute the user name to pass to the target application  
Ask for consent : ☒ Yes ☐ No  
Roles required to login : Roles required to login  
System where an enabled account is required :

### CAS Configuration

Response URL : http://127.0.1.1/  
Response URL  
Logout response URL : Logout response URL

Undo Apply changes

For more information about the attributes, you can visit [the CAS client detailed info](#).
