

Upgrade syncserver proxy

Step-by-step

To upgrade the version of the on-premise syncserver proxy, follow these steps:

1. Stop the syncserver container:

```
docker stop syncserver
```

2. Remove the container:

```
docker rm syncserver
```

3. Create a volume for the syncserver configuration:

```
docker volume create sync-conf
```

4. Create a file 'iam-sync-redeploy.sh' to hold the update script:

```
nano iam-sync-redeploy.sh
```

Use your preferred text editor; `nano` is used here.

5. Copy the following script:

```
docker run -d \  
  --name syncserver \  
  -v sync-conf:/opt/soffid/iam-sync/conf \  
  --restart always \  
  --network=host \  
  soffid/iam-sync:4.0.44
```

Replace '4.0.44' with the desired version.

6. Save and exit the editor.

7. Run the script:

```
bash iam-sync-redeploy.sh
```

You should see a response like this:

```
admsoffid@pam01:~$ bash iam-sync-redeploy.sh
syncserver
syncserver
1a71a2b06bdc9f9982ae6a227aafe85e260396dff24c4767bc07cc5ca7b3601e
```
