Step 6. Passwords rotation

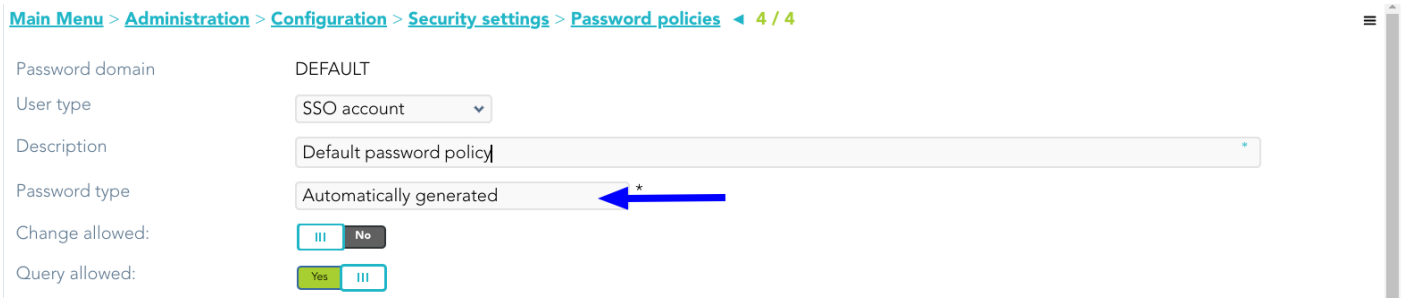

Introduction

The password rotation reduces the vulnerability to password-based attacks. Soffid allows you to limit the password lifespan and force you to change it.

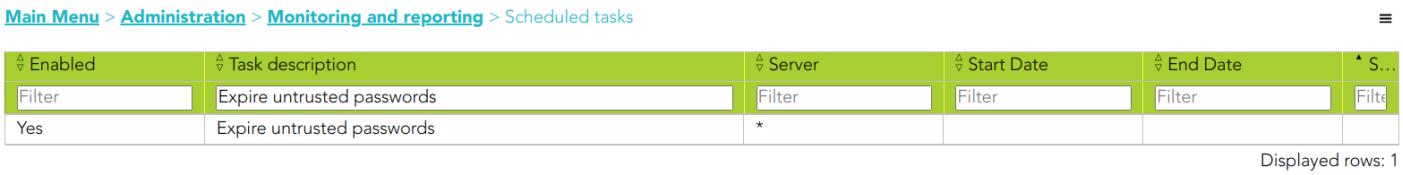

Soffid defines a procedure for Password rotation to keep safe the critical accounts. It allows you to create password policies with the proper configuration to create strong passwords, the **password type should be "Automatically generated**". Those policies must be assigned to critical accounts. Also, it allows to configure of an automatic task, **Expire untrusted passwords,** to check when a password has to be changed.
