

# Step 8.1. PAM Rules

## Step-by-step

1. To create a new PAM Rule, you must access the PAM Rules page in the following path:

Main Menu > Administration > Configure Soffid > Security settings > PAM rules

2. To add a new PAM rule, you must click the add button (+) and Soffid will display a new window to fill in the data.

- The **Name** should be an identificative and unique rule name. That field will be mandatory.
- The **Description** should be a brief description of the rule.
- The **Type** allows you to select the rule will be a keyboard or a screen rule. That field will be mandatory.
- The **Content** should be what the rule will detect. For instance, a Linux command like *sudo* or *rm \*-r*. That field will be mandatory.

3. Then you need to click on the "Apply changes" button to save the new PAM rule.

3.1. If you click on the "Undo" button, no updates will be saved.

4. Finally you can create a PAM policy to apply the rules.

## Screen overview

The screenshot shows a web-based configuration form for a PAM rule. It has a light gray background and a clean, modern design. The form is organized into sections with labels on the left and input fields on the right. The 'Name' field contains 'sudd'. The 'Description' field contains 'Executes sudo command'. The 'Type' field is a dropdown menu currently set to 'Keyboard'. The 'Content' field contains 'sudo'. At the bottom, there are two rows of metadata: 'Modified by' with 'admin' and 'Soffid Administrator', and 'Modified on' with '22/07/2021 09:38'. A hamburger menu icon is visible in the top right corner.

Name :	sudd
Description :	Executes sudo command
Type :	Keyboard ▾
Content :	sudo
Modified by :	admin
Modified on :	22/07/2021 09:38
