

# ☐☐ To bear in mind

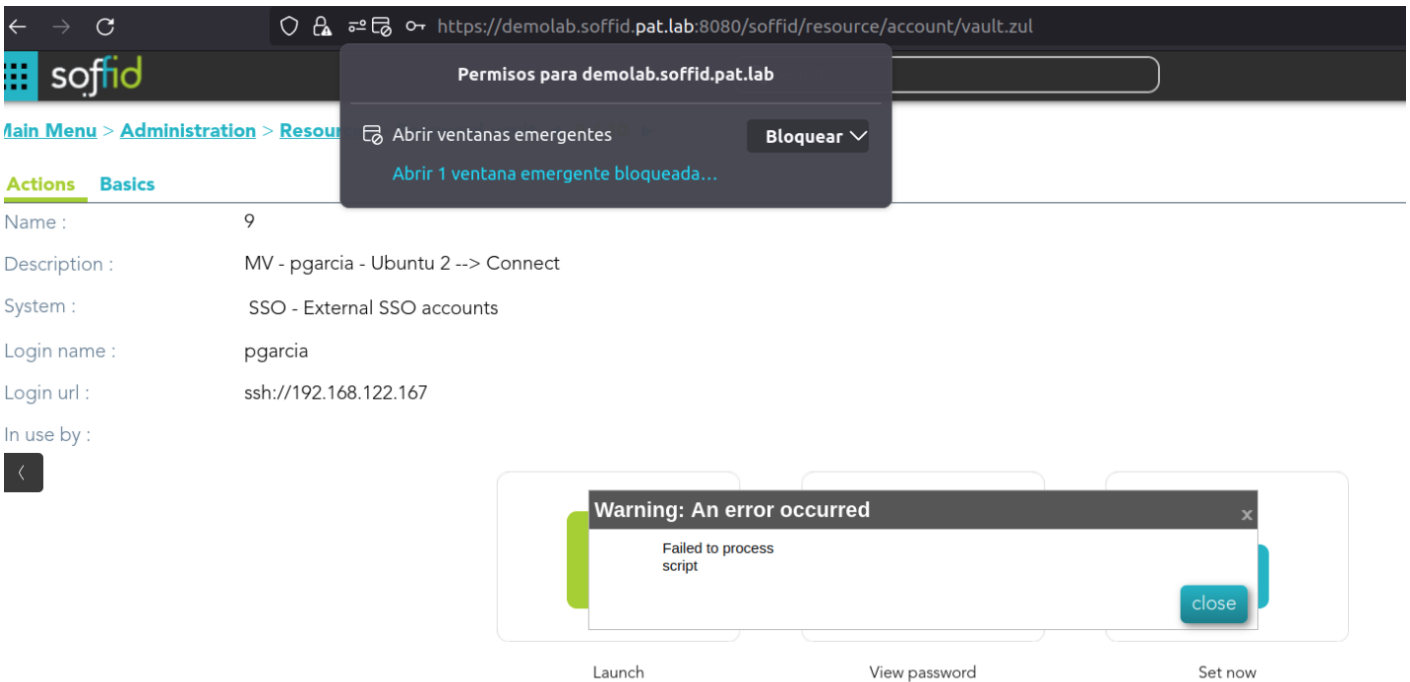

If you are working with Mozilla Firefox, it will be possible that this message will be displayed. To solve it, you must allow the pop-up windows

The screenshot shows a Firefox browser window with the URL `https://demolab.soffid.pat.lab:8080/soffid/resource/account/vault.zul`. A notification bar at the top states: "Firefox ha impedido que este sitio abriera una ventana emergente. Preferencias". The page content includes a breadcrumb trail: "Main Menu > Administration > Resources > Password vault < 8 / 10 >". Below this, there are tabs for "Actions" and "Basics". A table displays the following information:

|               |                                     |
|---------------|-------------------------------------|
| Name :        | 9                                   |
| Description : | MV - pgarcia - Ubuntu 2 --> Connect |
| System :      | SSO - External SSO accounts         |
| Login name :  | pgarcia                             |
| Login url :   | ssh://192.168.122.167               |
| In use by :   |                                     |

Below the table, there are three buttons: "Launch", "View password", and "Set now". A warning dialog box is overlaid on the "View password" button, titled "Warning: An error occurred" with the message "Failed to process script" and a "close" button.

The screenshot shows the same Firefox browser window as above, but with a permission dialog box open. The dialog is titled "Permisos para demolab.soffid.pat.lab" and contains the following text:

Abrir ventanas emergentes **Bloquear** ▼  
Abrir 1 ventana emergente bloqueada...

The background content is partially obscured by the dialog. The table from the previous screenshot is still visible. The "Warning: An error occurred" dialog box is also present, overlaid on the "View password" button.
