Testing tool

REST clients

Any REST client may be used to test and consume our SCIM REST web service.

Bruno

Bruno is a free and open-source API client used to test, explore, and document APIs. Think of it as a tool that lets you send HTTP requests (GET, POST, PUT, DELETE, etc.) to any API and inspect the responses — without writing code.

You can download it at the following link: https://www.usebruno.com/downloads

> Bruno is compatible with Linux and Windows.

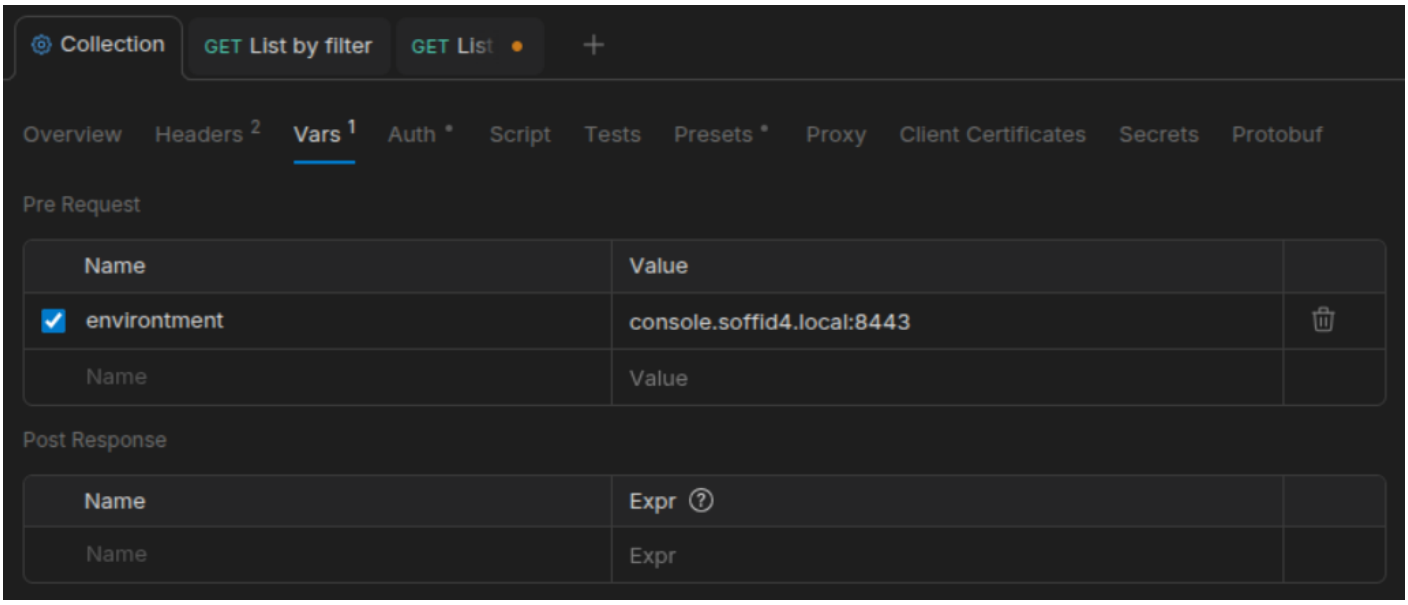

Sample collection

> To enable you to conduct your initial tests quickly, we provide a collection of samples that you can import into your Bruno instance.

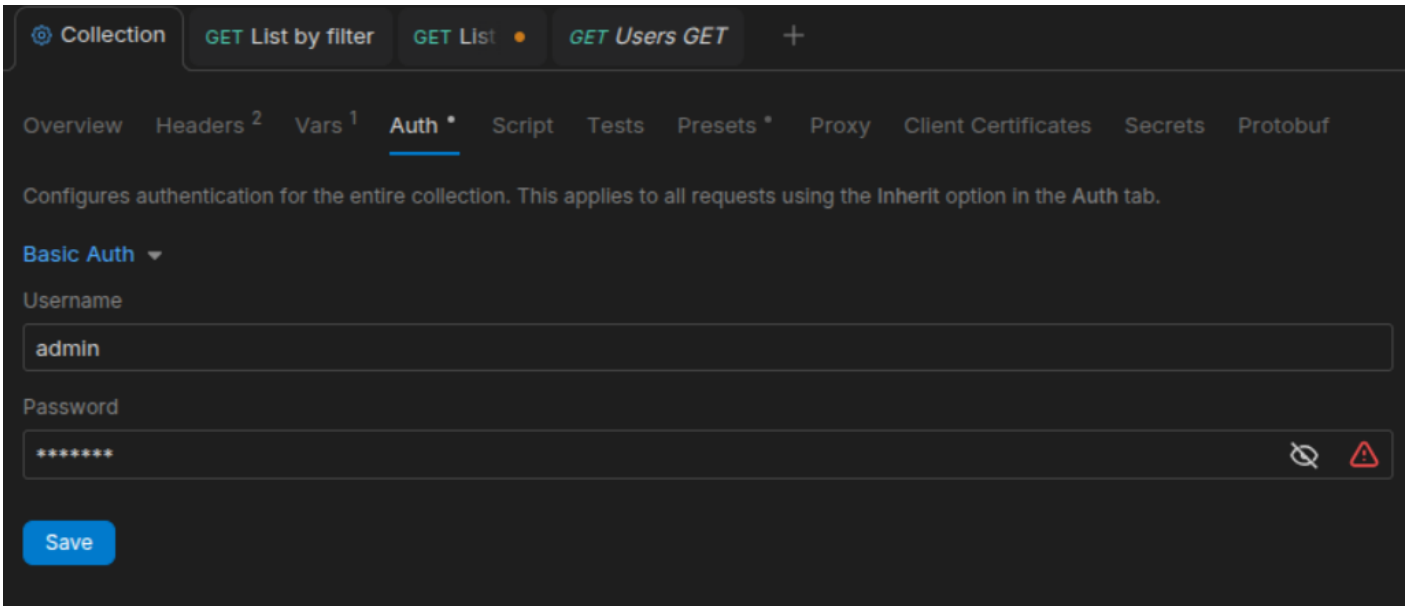

SOFFID SCIM.zip

Once you imported the project, in settings, is useful to create global variables and use them in the request URLs.

Such as, the **environment**.

And the Auth method to 'Basic Auth', providing your Soffid **username** and **password**.
