# Testing tool

## REST clients

Any REST client may be used to test and consume our SCIM REST web service.

### Bruno

Bruno is a free and open-source API client used to test, explore, and document APIs. Think of it as a tool that lets you send HTTP requests (GET, POST, PUT, DELETE, etc.) to any API and inspect the responses — without writing code.

You can download it at the following link: <https://www.usebruno.com/downloads>

Bruno is compatible with Linux and Windows.

### Sample collection

To enable you to conduct your initial tests quickly, we provide a collection of samples that you can import into your Bruno instance.

#### SOFFID SCIM.zip

Once you imported the project, in settings, is useful to create global variables and use them in the request URLs.

Such as, the **environment**.

Collection GET List by filter GET List +

Overview Headers<sup>2</sup> Vars<sup>1</sup> Auth \* Script Tests Presets \* Proxy Client Certificates Secrets Protobuf

Pre Request

Name	Value	
<input checked="" type="checkbox"/> environment	console.soffid4.local:8443	
Name	Value	

Post Response

Name	Expr <sup>?</sup>	
Name	Expr	

And the Auth method to 'Basic Auth', providing your Soffid **username** and **password**.

Collection GET List by filter GET List GET Users GET +

Overview Headers<sup>2</sup> Vars<sup>1</sup> Auth \* Script Tests Presets \* Proxy Client Certificates Secrets Protobuf

Configures authentication for the entire collection. This applies to all requests using the Inherit option in the Auth tab.

Basic Auth ▾
