# Testing tool

REST clients

Any REST client may be used to test and consume our SCIM REST web service.

RESTer

In this case, we will show the usage with RESTer, a browser extension available for Chrome and Firefox.

> This extension may be added from these links: Chrome, Firefox

Once it's added to the browser, this tool is accessible from its toolbar icon:

This is the RESTer application window:

> Remember to use the HTTP headers specified in SCIM in SCIM in Soffid-HTTPrequest

Remember to use a user with authorization. See 8. How to use SCIM in[How to use SCIM in Soffid-Confirmauthorization](#)

Postman

Postman is another REST client, you can use it as an extension of the browser, but we recommend the operating system application.
