2026-06-12 New feature: use holder group in UID script

The new feature

> Now, on the Service provider configuration page, the **holder group** can now be used in the **UID** selection **script**.

Bear in mind

Please note the following points:

- If there are multiple levels of folders, **only** the **authorizations** from the **parent folder** are **inherited**.

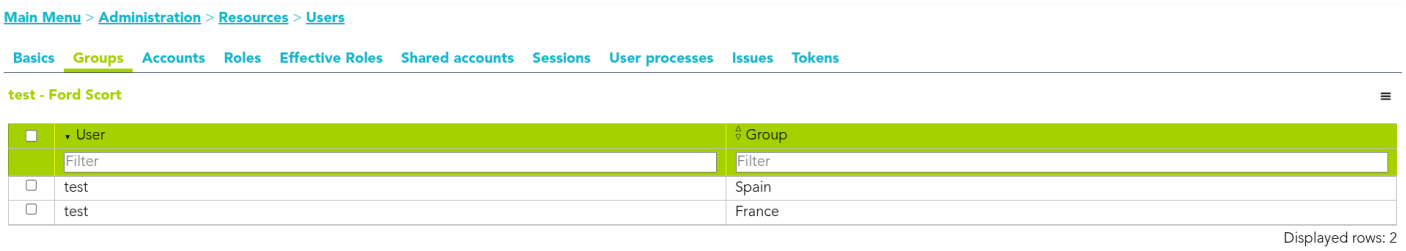

How to configure it?

The following **components** must be installed:

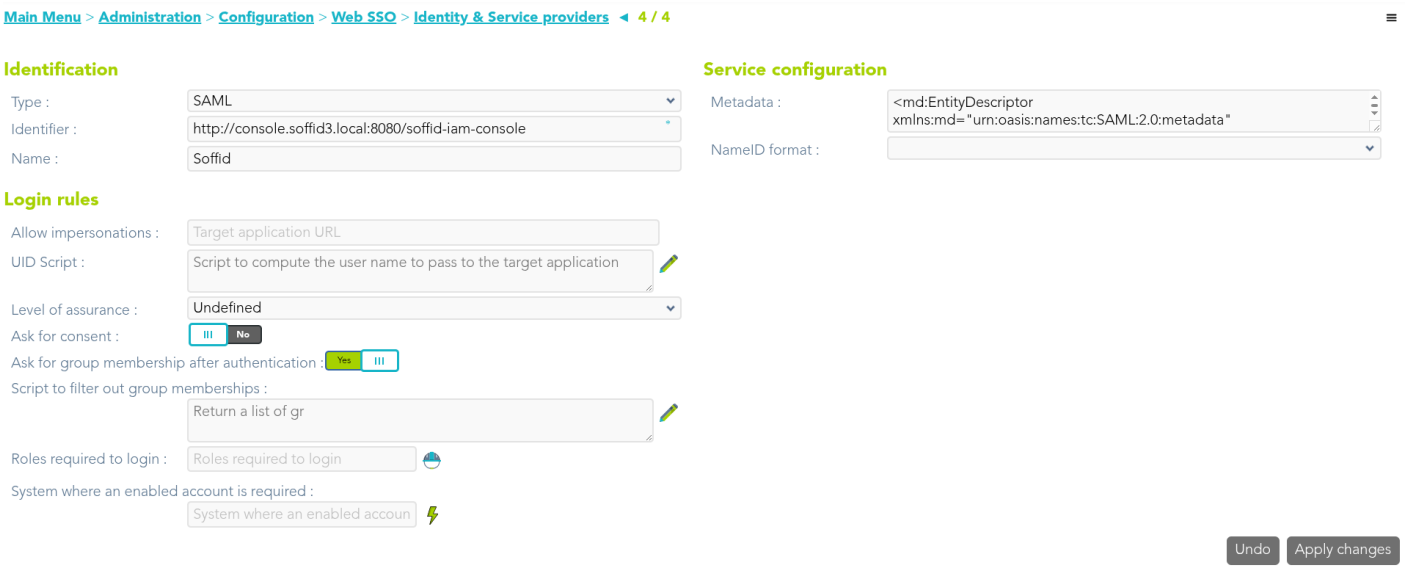

- Federation addon 3.6.92 (or higher)

Let's look at an example

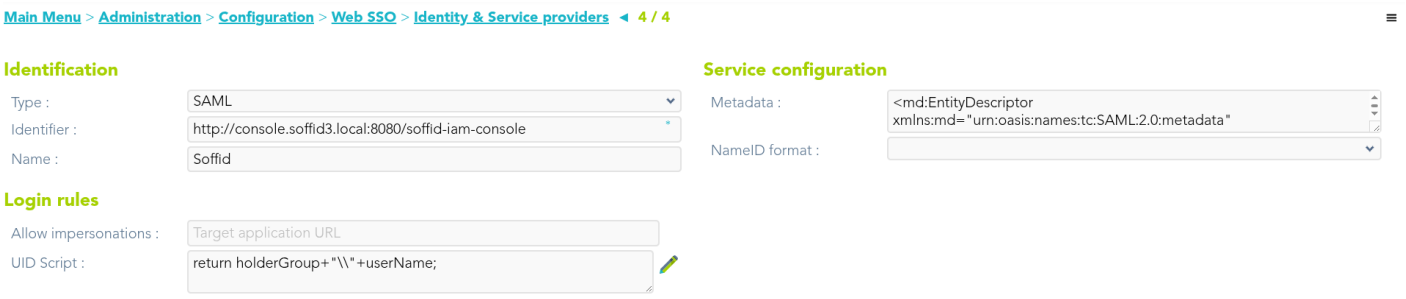

First of all, we check that we have a **user** with **holder groups**.

We can now confirm that the **service provider** has the option "" enabled.

We use the **holderGroup** attribute in the **UID script**.

Finally, we're going to authenticate with the service provider and **check the value of the UID attribute**.

English Español Català

Please, identify yourself.

User name: test

Change user name

Password: ••••••••••

Login

A service provider named http://console.soffid3.local:8080/soffid-iam-console needs to authenticate you.
