

# 2026-09-30 New feature: hide root page

## The new feature

On the **Identity providers** configuration page, the option "**Hide root page**" has been added so that nothing is displayed at the IdP's root URL.

## Bear in mind

Please note the following points:

- This change only affects the IdP's base URL: `https://hostname:port`

## How to configure it?

The following **components** must be installed:

- Federation addon 3.6.96 (or higher)

## Let's look at an example

If we go directly to the IdP's URL, the IdP's login page appears.

<https://idp.soffid3.local:1333>

Please, identify yourself.

User name:

Login

A service provider from anonymous needs to authenticate you.

If we want to disable this behaviour so that the IdP does nothing, we need to go to the **Soffid IdP** and **enable** the "**Hide root page**" attribute.

### Look and feel

Logo : 

CSS Style :

Html header :

Html footer :

Language (2 characters code) :

Hide root page : ☒ Yes ☐ No

Undo Apply changes

Now, when accessing to the IdP's **root URL**, the browser will **reject** the request and display the **same page as before**.
