Column Selector

Description

Throughout the Soffid Console, we can find a large number of list-type components. These lists are used to display the corresponding objects data in each case, for instance users, accounts, ...

This component allows you to add or remove columns, but also allows you to sort by the name of the columns to display them in the list. Be in mind, the columns are the attributes of an object (an user, or an account...).
It is easy to use, once you click on the hamburger icon and the Add or remove columns option, Soffid will display a window with the available columns for the object, then just drag and drop them in the order you want and click on the Apply changes button. Once you Applu changes, Soffid will display the list with the attributes in the order you defined.
