# Disable inactive accounts

## Description

Probably there are some accounts that are no longer used. Using this tool you will be able to identify them and act upon them.

The process is a two step process:

1. Filter out the universe of accounts to analyze.
2. Select the actions to perform on that accounts.

The available actions are the following:

- Send an email.
- Disable the user.
- Remove accounts from the target system.

It's usual to initially use this tool for only a subset of your accounts.

For instance, you can send a message when the password is reaching the expiration date, disable the account when no login has been made in the last 90 days or completely remove it when the account has been disabled for 30 days
