# Disable inactive users

## Description

Probably there are some users that do not need access to any information system. Using this tool you will be able to identify them and act upon them.

The process is a two step process:

1. Filter out the universe of users to analyze.
2. Select the actions to perform on these users.

The available actions are the following:

- Send an email.
- Disable the user.
- Remove accounts from the target system.

It's usual to initially use this tool for only a subset of your users.

For instance, you can send a message when the password is reaching the expiration date, disable the user when no login has been made in the last 90 days or completely remove its accounts when the identity has been disabled for 30 days.
