Actions

Table actions

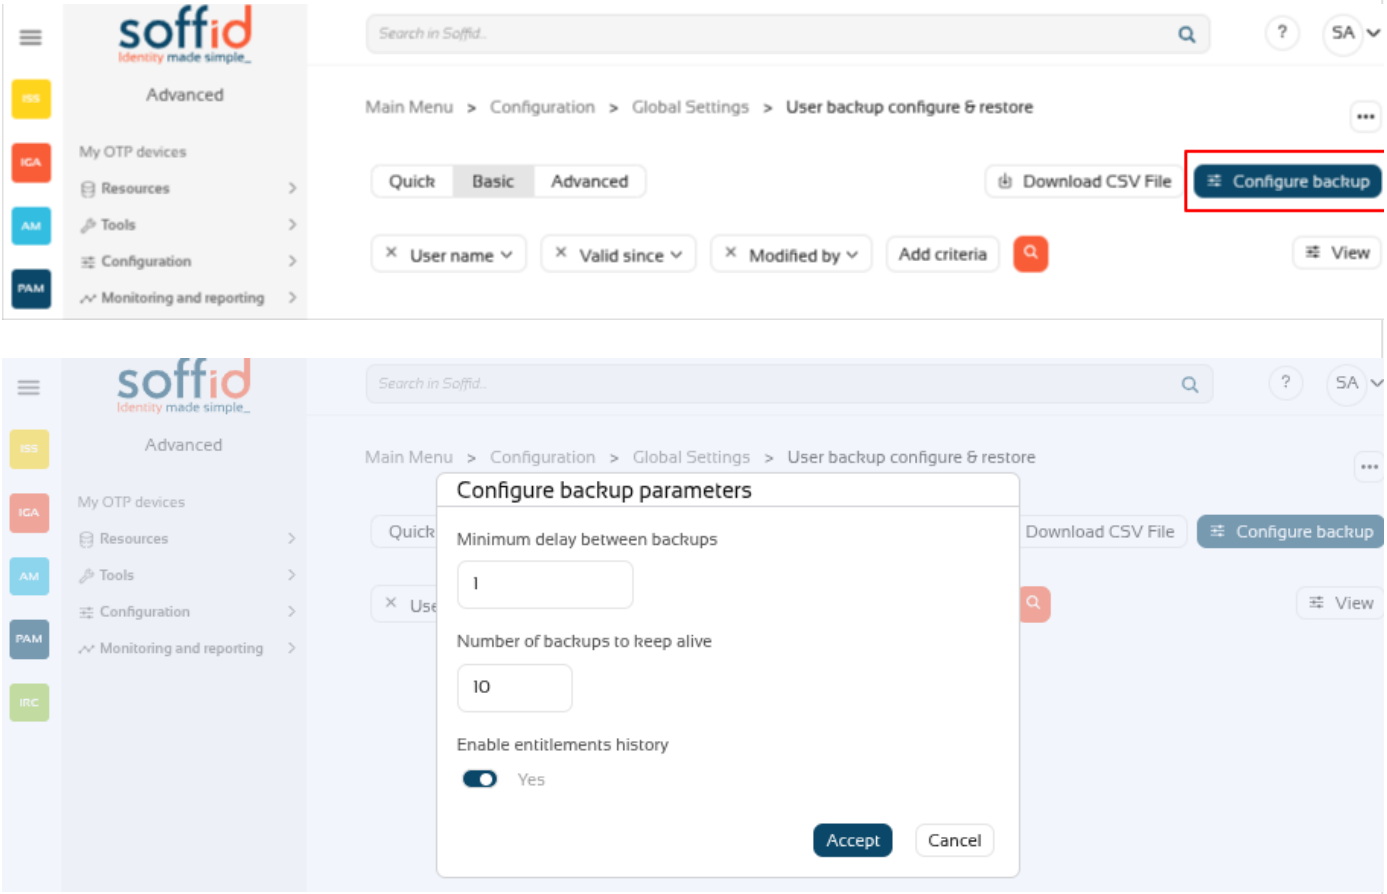

Query	Allows you to query users through different search systems, Basic and Advanced.
Restore	Allows you to restore one or more user's snapshots. First of all, you need select one or more snapshots. Second, you need to click the "Restore" button. Then Soffid will run the restore process. **Image** 
Download CSV File	Allows you to download a CSV file with the basic information of all backups, with the same columns as displayed in the table.
Configure backup	Allows you to configure the backup parameters.
View	Allows you to show and hide columns in the table. You can also set the order in which the columns will be displayed.
Download	Allows you to download an XML file with the user. You only need to click on the download icon of one of the records and save the file on your computer.

Configure backup button

With the "Configure backup" button, you can configure the frequency and number of backups. These are the available parameters:

- **Minimum delay between backups**: if the value is 1, when a backup is created, the system will not create a new backup until 1 day later, even if there has been more than one change during that period.
- **Number of backups to keep alive**: if the value is 10, when 10 backups are reached, the oldest backup will be deleted when the next one is created.
- **Enable entitlements history**: enable the history of roles assigned to users.

Others

Backup tab on user's page

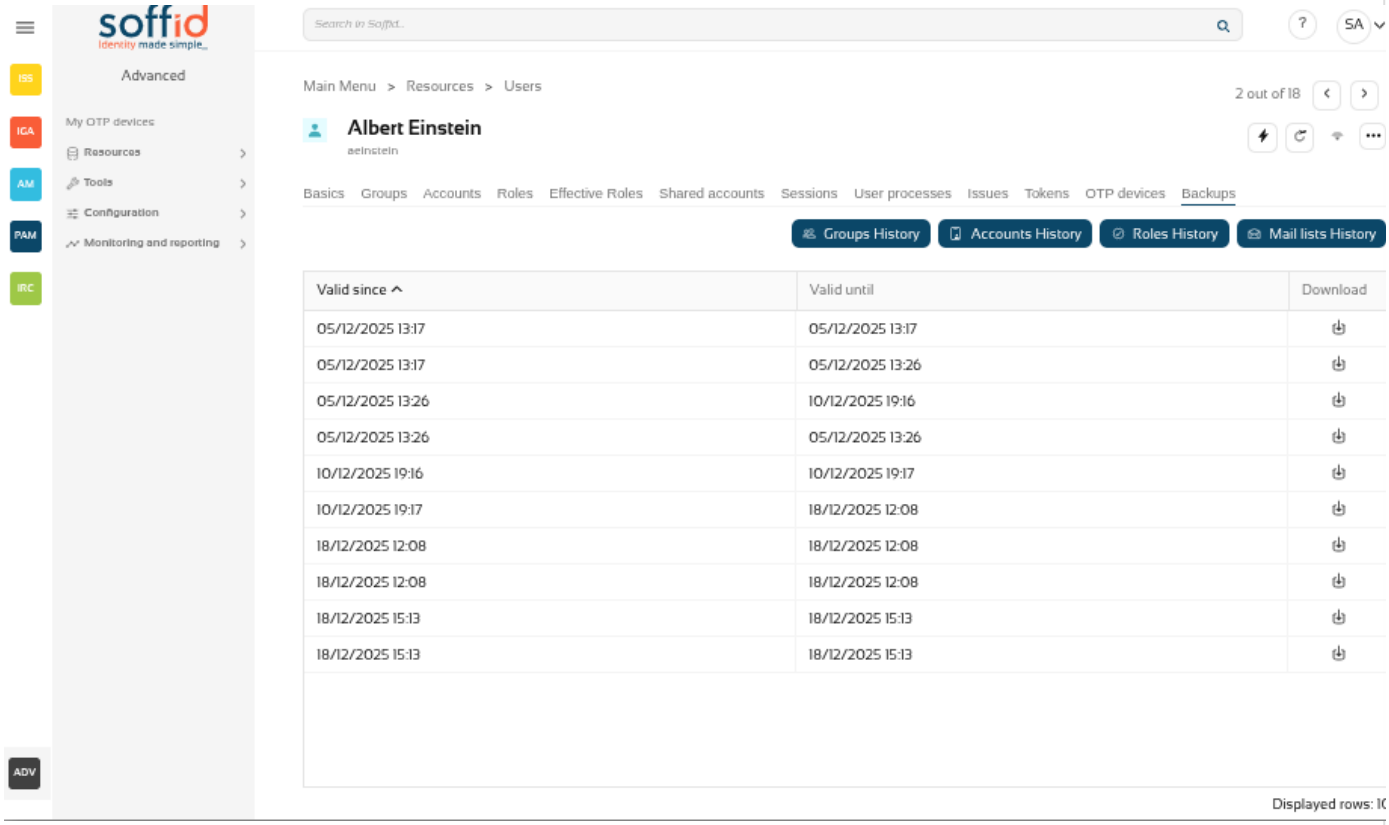

On the users screen, when you select a user, this addon enables the **Backups tab**.

Image

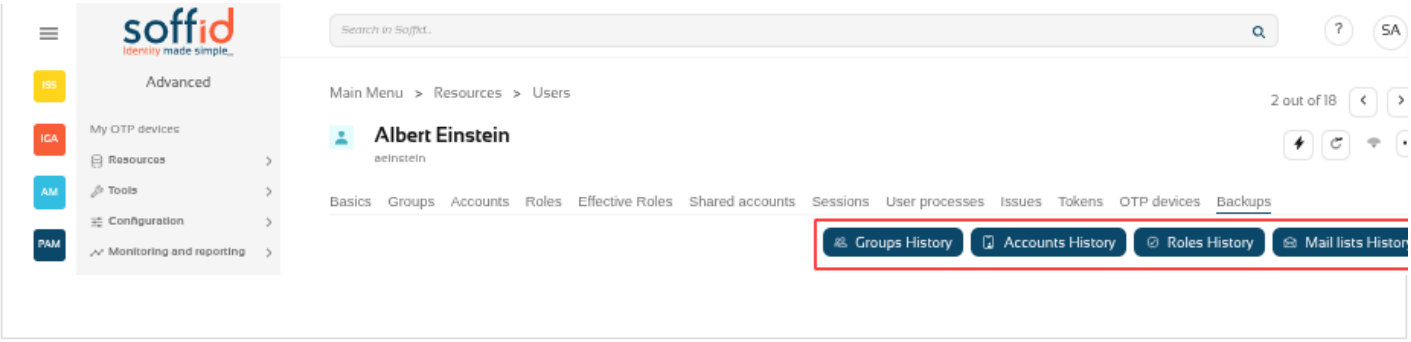

This tab displays the **user's backups**.

Image

There are also several **buttons** with the rest of the items that can have backup.

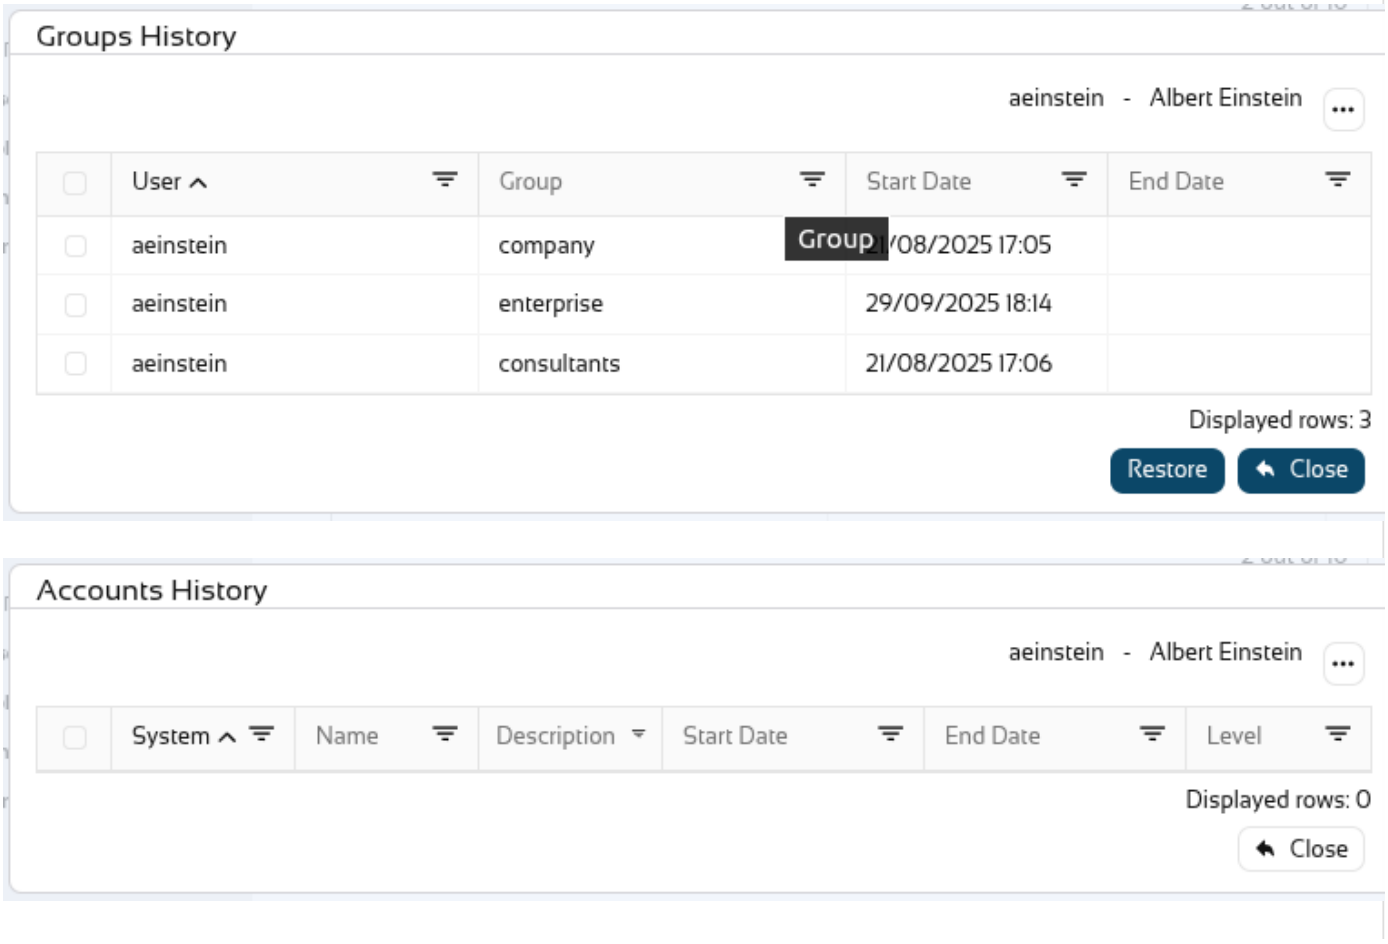

Image

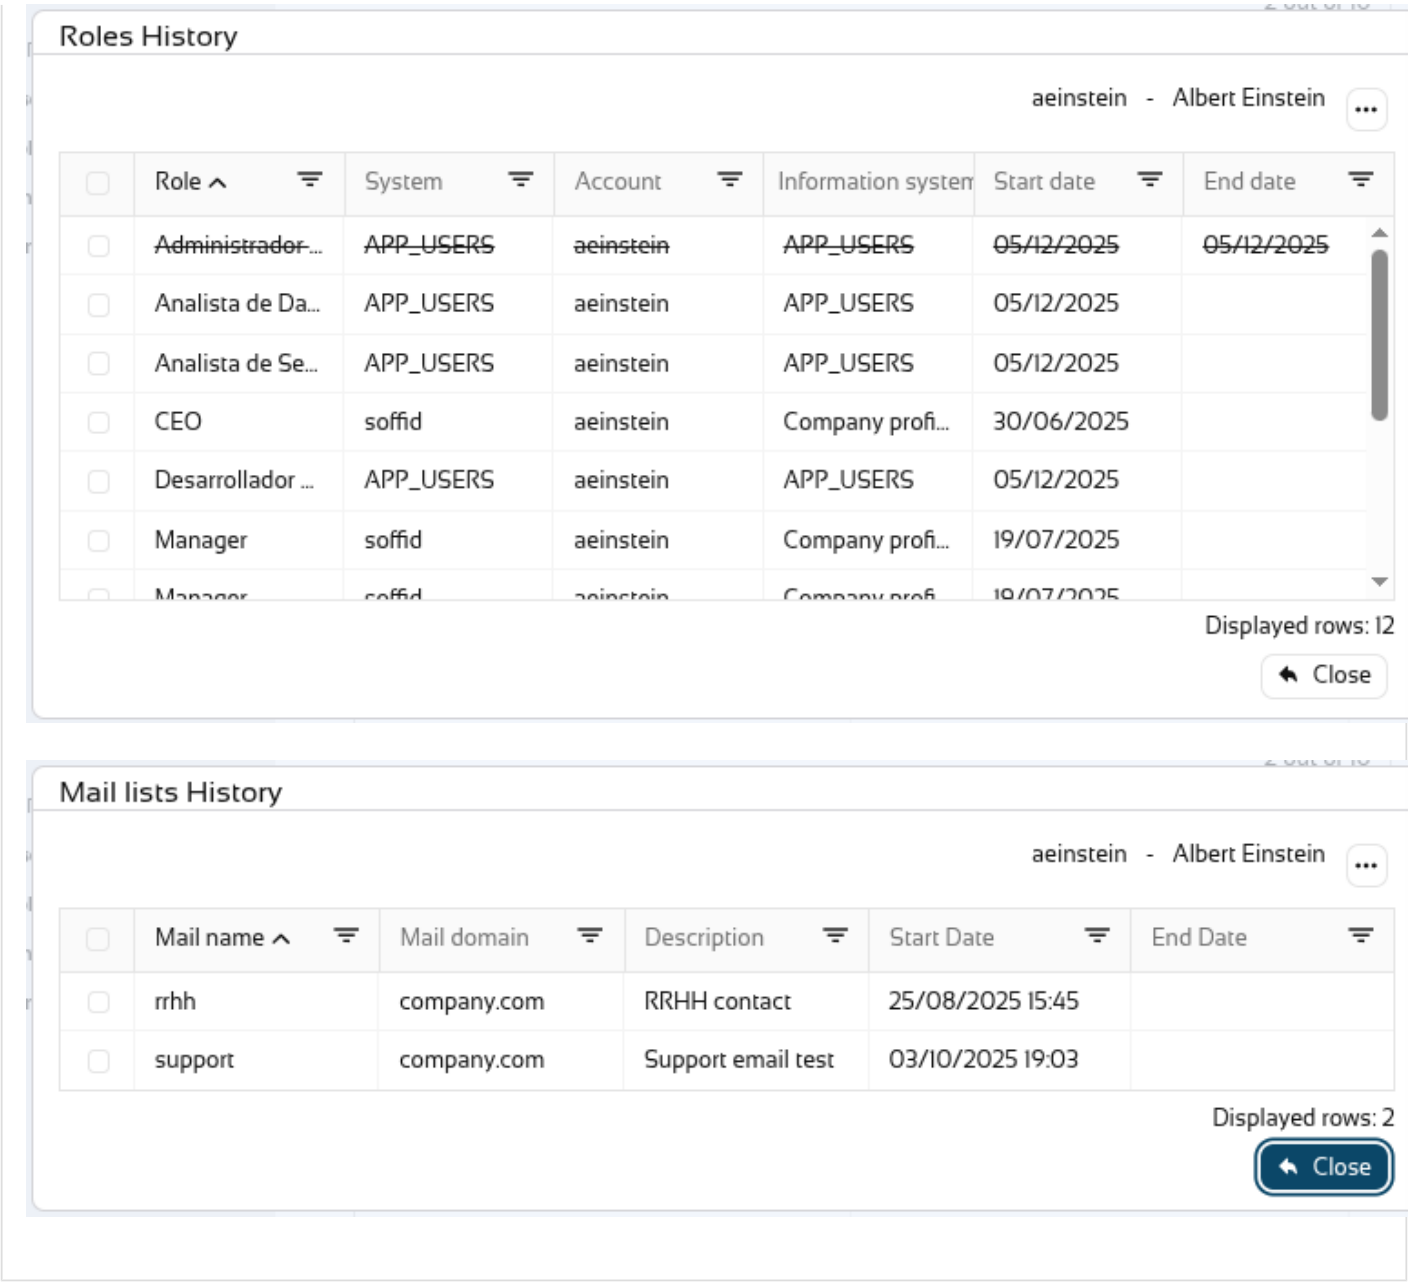

These are the buttons:

- **Groups History**: user assignments to groups have backup
- **Accounts History**: user's accounts have backup
- **Roles History**: user's roles (grants) have backup
- **Mail lists History**: user's mail lists have backup

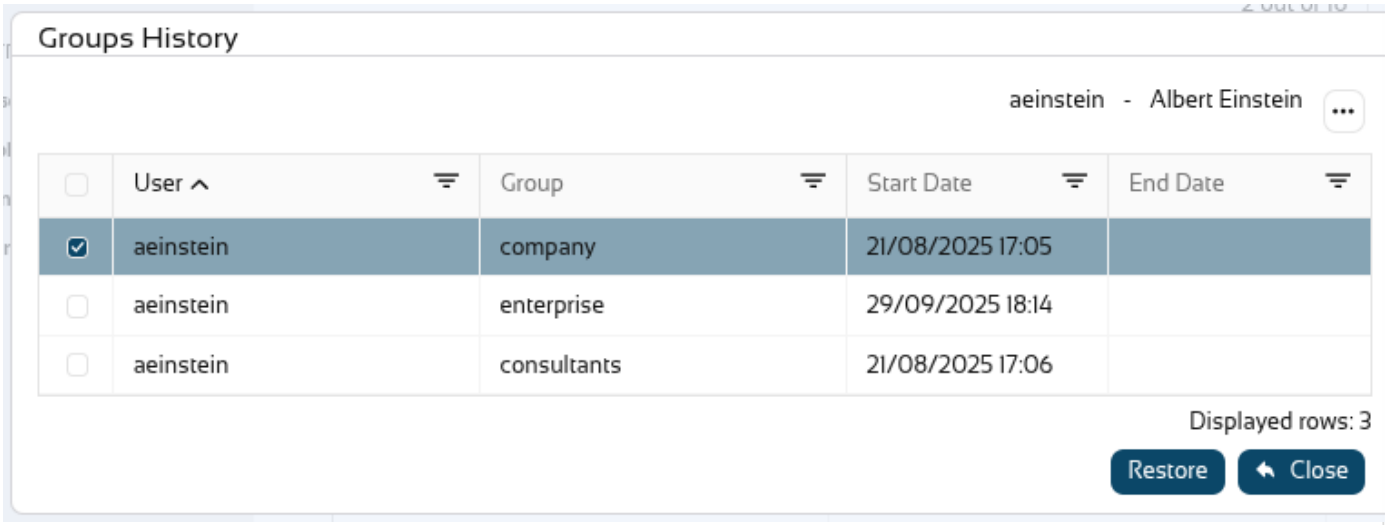

Image

In any of the four options, when selecting an old record, the '**Restore**' button will appear and this object can be restored to the user.
