Soffid 4 new releases

- 2025 december
- 2026 january
- 2026 february
- 2026 march
- 2026 april
- 2026 may
- 2026 june
- 2026 july
- 2026 august
- 2026 september

2025 december

2025-12-31

- **REST connector 4.0.3**
  - Get rid of Wink
- **Windows connector 6.0.8**
  - Update LDAP classes
  - Fix configuration page
  - Fixes for version 4
  - Use released pwshell
  - Fix initial configuration

2025-12-24

- **Recertification addon 4.0.3**
  - Fix query error
- **Reports addon 4.0.6**
  - Add anonymous URL for charts
  - Update webservices addon
  - Add widgets
- **Breakglass addon 2.0.0**
  - Upgrade for version 4

2025-12-17

- **Consola 4.0.11**
  - Apply policy task is displayed for systems with automatic account creation
  - Add prometheus agent
- **Syncserver 4.0.13**
  - Handle tasks created in version 3
- **Admin addon 4.0.3**
  - Improve scheduled task UI
  - Add new AI use cases
  - Fix export/import
  - Use gemini-2.5-pro for chatting

    - Update dependencies
    - Add missing dependency
- **Addon bpm 4.0.6**
    - Fix null pointer when there is no grant

2026 january

2026-01-07

- **Console 4.0.19**
  - Improve AI interface
  - Fix food sometimes does not appear
  - Improve startup performance
  - Fix multiline messages
  - Fix SSO Agent name
  - Improve boot performance
  - Fix welcome switch
  - Generate documentation
  - Fix multiline messages
  - Fix SSO Agent name
  - Improve boot performance
  - Fix welcome switch
  - Fix plugin parser
  - Fix compilation errors
  - Fix AI Frame
  - Fix upgrade to version 3
  - Add missing dependency between services
  - Mobile CSSs
  - Fix custom object search
  - Make agent transition easier
  - Add to switch to generate documentation on demand
  - Nullify URL when URL is blank
  - Fix monitoring remote server status
  - Change PWA Name
  - Fix counter generator in multi-tenant setup
  - Ignore yauaa log
  - Change sync server icons
  - Upgrade zkdb
  - Remove unneeded log
  - Improve log performance
  - Reload data when the configuration log has changed
  - Exclude deleted accounts from effective roles calculation #625
  - Improve log reader reponsiveness
  - Keep history of user-accounts #Soffid/addons/backup/12

    - Fix. Restart sync server from plugins page #624
    - Do not override log object #623
    - Fix agents query by name #622
    - Remove tasks when removing an agent #621
    - Enable network intelligence on any product #618
- **Syncserver 4.0.16**
    - Fix reconcile engine for new accounts
    - Update console version
    - Fix wrong dao lookup
    - Add debug information
    - Remove Yauaa logging
- **Federation addon 4.0.13**
    - Fix CSS attributes #52
    - Apply form class
    - Fix CSS style in idp
    - Fix legacy ESSO startup
    - Fix invocation to old handler #50
    - Change button to regenerate dynamic open id server key #49
    - Fix scopes list #47
- **Admin addon 4.0.4**
    - New tests
    - Fix import process #5
    - Fix page arrangement
    - Add timestamp to script log
    - Fix metadata exporter never ends
- **Backup addon 4.0.4**
    - Fix primary groups are always dashed #11
- **Breakglass addon 2.0.1**
    - Fix tests
- **Google Apps Connector 4.0.0**
    - Upgrade to version 4
- **Windows Connector 6.0.9**
    - Add possword policy
    - Fix account inital reconciliation
- **Kebernetes Connector 1.0.1**
    - Initial version
    - Fix UI page

2026-01-14

- **Console 4.0.20**
    - Fix button to remove acconts in discovery page #599
    - Add crud handler for entry points

    - Fix: frame is not hidden when embedded frame is recreated #600
    - Fix account system cannot be null #597
    - Fix method to remove accounts from vault
    - Fix method to move accounts accross folders
    - Do not display removed accounts in password vault
    - Upgrade zkdb
    - Method to undelete accounts #Soffid/addons/backup/17
    - Do not fail when the user cannot remove accounts
    - Fix deleted user accounts are returned as valid user accounts #629
    - Fix progress labels with values less than 0
    - Fix ACL field fails when the user cannot query users or groups
- **Recover password addon 4.0.6**
    - Reorder fields
    - Fix messages #20

2026-01-21

- **Console 4.0.22**
    - Method to temporary grant/revoke usage of entry points
    - Do not cache configuration page
    - Do not display menu when no option is visible #644
    - Allow roles to be granted more than once, with different holder groups #642
    - Upgrade zkdb
    - Add account history object
    - Fix. Change query type in application entry points page #637
    - Fix stack overflow #628
    - Remove tasks when removing an agent
    - Glitch in password policies page #617
    - Fix glitch in password policies UI #616
    - Hide id of user type #615
    - Upgrade zkdb to fix #610
    - Hide threads field #604
    - Fix shell plugin #603
    - Fix monitor progress pct value
    - Do not commit automatically after changing the server name #596
    - Raise toasts
    - Enable BPM for PAM licenses #595
    - Use standard view for pam session servers #594
- **Syncserver 4.0.17**
    - Remove annoying log
    - Register cancelled tasks
    - Add exception message to log file
- **Shell connector 4.0.1**
    - Fix removal of grants

2026-01-28

- **Console 4.0.23**
  - Allow access to local network in embedded iframe

2026 february

2026-02-04

- **Console 4.0.29**
  - Fix tasks are not properly loaded #650
  - Fix application link does not work
  - Set generated password non-editable
  - Fix entry point is set as "null"
  - Fix reservation without entry point
  - Display diagram in a popup window Soffid/addons/bpm#26
  - Fix button size inside trees #591
  - Fix password policies page #590
  - Fix toast position #589
  - Fix separator labels #588
  - Fix method to reset remote servers
  - Upgrade zkdb
  - Upgrade zkdb-api
  - Initialize virtual attributes in sync server
  - Fix zoom button in property editor
  - Sort object mappings #655
  - Add sleep method
  - Add index by user attribute value
  - Enlarge previous executions table #587
  - Fixed counter generation #580
  - Remove old WF to reconcile accounts #579
  - Upgrade plugins #576
  - Fix style of screen to change password #573
  - setTimeout function
  - Fix error during datadiv initialization #571
  - Upgrade rest plugin
  - Upgrade zkdb #569
  - Hude agent tabs until the agent iss created #568
  - Fix method to disable accounts #547
  - Change messages source
  - Fix button to remove rols #530
  - Fix field type in account metadata window
  - Javascript methods: setTimeout and sleep
  - Improve columns selector

- **Syncserver 4.0.23**
  - Use service locator in remote proxies
  - Upgrade zkdb version
  - Fix null pointer in pre-update-password trigger
  - Update console version
  - Enable debugging for com.soffid classes
  - Add log manager for proxy agents
  - Improve method to remove accounts
  - Hide ProxyConnectionFactory logs
  - Improve loader process
  - Fix reconciliation without system name
  - Improve loader performance
  - Added debug information
  - Fix console sessions are dropped due to delays
- **REST plugin 4.0.4**
  - Fix login encoding
  - Use load or select methods
- **SQL server plugin 4.0.1**
  - Version number was missing
- **PAM (only in Docker Hub) 1.4.82**
  - Do not remove static-data directory

2026-02-11

- **Console 4.0.33**
  - Fix group message #392
  - Make error message more helpful
  - Default port for syslog+ssl is 6514
  - Include script stack trace
  - Add webservice classes classifier
  - Add offline button in sync server monitoring
  - Fix page to query account's password
  - Fix method to propagate changes
  - Improve monitoring page
  - Enable remove button in single-selection tables
  - Remove method to compute policies when synchronizing objects
  - Change installer icon
  - Fix upgrade of domain values to version 4
- **Syncserver 4.0.25**
  - Fix authoritative loader engine
  - Fix tasks to synchronize objects
  - Improve mechanism to monitor tasks queue
  - Upgrade console version

    - Change version number to 4 in application link
    - Do not throw exception when the group is not allowed
- **Federation addon 4.0.14**
    - Fix for the automatic deletion process of oauth tokens
    - Fix duplicated attribute
    - Fix class-loading problem when invoked from the identity provider
    - Use new "wait" icon #57
    - Change style of cancel button #56
    - Fix selector color #55
    - Fix host tokens tab #Soffid/console/632
    - Add option to remove authentication methods #611
    - Fix initialization
    - Fix progressive profile method
    - Update OTP addon version #536
    - Place CAS Settings in a separated section
    - Remove legacy method to register hosts
    - Hack for MFA authentication on Azure
    - New keytab parser
- **SCIM addon 4.0.3**
    - Fix class not found: UserType
- **XACML addon 4.0.6**
    - Fix legacy icons #6
    - Properly expose entrypoint in XACML rules

2026-02-18

- **Console 4.0.37**
    - Fix magnifier icon in password vault
    - Improve method to guess account bound to a service
    - Fix account lookup
- **Syncserver 4.0.27**
    - Change JVM parameters for Java 17
    - Discard service 113/tcp ident
    - Ignore hosts without significant services
- **Reports addon 4.0.7**
    - Change label in remove button #10
    - Remove import button #8
    - Remove import button #7
    - Fix label for removal button #6
    - Fix wrong message after removing report schedule #5
    - Fix tab to upload reports #4

2026-02-24

- **Console 4.0.38**
  - Fix open source publication process
- **Syncserver 4.0.28**
  - Fix null pointer changing service account password
  - Always one shared thread
  - Improve logs
  - Fix reconcile without external ids
  - Remove unneeded log
  - Change attribute name from lastPasswordUpdate to lastPasswordSet
  - Do not CXF spring integration
- **Federation addon 4.0.15**
  - Fix null pointer
  - Adapt porting of changes from version-3
  - Fix porting
  - Add option to set custom audiences
  - SSO Behaviour
  - Add audience field
- **Backup addon 4.0.5**
  - Hide user backup id in queries #6
  - Change buttons style
  - Remove quick search mode
  - Remove button to select columns #4
  - Remove duplicated buttons #3
  - Fix excessive inheritance
- **PAM (only in Docker Hub) 1.4.84**
  - SSH Server with user provided passwords
  - Improve logs
  - Update browser image
  - Fix compilation errors
  - Additional log

2026 march

2026-03-04

- **Console 4.0.39**
  - Fix compatibility issue with HTML fields
  - Allow accounts to have the same name as a deleted one
  - Properly unwrap javascript dates
- **Syncserver 4.0.30**
  - Fix method to retrieve account object
  - Fix interface is defined more than once
  - Improve exception detail
  - Upgrade version of iam-core
  - Fixes to convert localdate into Calendar or Date

2026-03-11

- **Console 4.0.42**
  - Improve migration process
  - Debug mail sessions #Soffid/cloud/federation-cloud/10
  - Add method to fetch AD domains
- **Syncserver 4.0.31**
  - Upgrade console dependency
  - Fix dumping log in stdout
- **Federation addon 4.0.18**
  - Refresh configuration when needed
- **Recover password addon 4.0.7**
  - Fix fill-in window style #17
  - Fix error checking for null datataype #11
  - Fix message generation #10
  - Fix button message #9
- **Admin addon 4.0.5**
  - Fix dependency versions #8
  - Use the right interpreter
- **BPM addon 4.0.7**
  - Fix display of risks
  - Show BPM editor with PAM license

    - Menu handler in account reservation workflow
    - Fix editor display
    - Use correct colors for diagram #26
    - Fix reorder fields #24
    - Add button to remove attributes from attribute window
- **LDAP connector 4.0.1**
    - Multiple bug fixes
- **SAP connector 4.0.1**
    - Fix checkbox to manage roles
    - Remove eclipse file
    - Fix account reconciliation
- **Windows connector 6.0.11**
    - Fix method to rename objects
    - Fix simple windows agent
    - Use server method to retrieve active directories
    - Update CI/CD method

2026-03-18

- **Console 4.0.46**
    - Improve migration process
    - Debug mail sessions
    - Add method to fetch AD domains
    - Change method to publish
    - Do not fail when a file does not exist
    - Ignore host not found
    - Fix error when host does not exist in PAM URL
    - Remove account attributes (migration issue)
    - Improve scheduled tasks form
    - Fix SQL syntax error
    - Migration issue. Set default dispatcher type
- **Federation addon 4.0.19**
    - Fix double quote
    - Same challenge for each push authenticator
    - Accept gateway parameter for CAS login

2026-03-25

- **Console 4.0.47**
    - Fix renaming a role with the same name as a deleted one
    - Fix upgrade to version 4

    - Improve exception message including javascript stack trace
    - Add password policy metadata for IA generation
    - Improve SEQUENCE generator. Add a primary key to the table
- **Federation addon 4.0.20**
    - Verify signatures
    - x-forwarded-for does not contain commas
    - Propagates loa from third party idp
- **Windows plugin 6.0.12**
    - Fixes a "Connection timeout" problem when trying to fetch accounts list
- **PAM (only in Docker Hub) 1.4.86**
    - Upgrade chrome version
    - Add gke image
    - Kiosk mode for http and https
    - Accept pke keys in base64
    - Always apply ips policies
    - Remove duplicated /
    - Avoid null pointer

2026 april

2026-04-22

- **Console 4.0.53**
  - Fix error creating mappings
  - Prevent null pointer
  - Fix method to find deleted roles
  - Fix popup window with system raw attributes
  - Allow meatadata types page in AM license
  - Update LDAP & Windows plugin
  - Cleanup latest link
  - Fix infinite loop starting a discovery task
  - Prevent deadlock when changing an account password on the sync server
  - feat: Add global SAML logout option
  - Improve remote action log
  - Fix role deletion
  - Add entry point metadata
  - Publish issue service
  - Add missing class
  - Make last execution label more clear
  - Allow port in syslog server parameter
  - Option to not to store user credentials
  - Fix when the server is a standby server
  - Send syslog message size
  - Display error message when connecting to a sync server
  - Option to not to store user credentials
  - Allow manual launcher when passwords are not stored
  - Fix merge errors
  - Improve launching accounts without well-known password
  - Improve log file selector
  - Fix link creation for documentation
  - Fix link creation
  - Fix syncserver is marked as offline
  - Optimize creation of the search dictionary
- **Syncserver 4.0.34**
  - Debug in BaseAgent
  - Update jaxb implementation
  - fix: Pipelines are not fully loaded
  - Change deployment URL

    - Publish syncserver on docker hub
    - Fix error processing duplicated OoB task
    - Force method to intialize trusted certificates from source
    - Log certificate failures
    - Upgrade console
    - Ignore stand-by servers in servers list
    - Decode username in remote request
    - Add jsoncpp dependency for role mining
    - Fix error in passwordless agents
    - Fix transaction to change service passwords
    - Method to ignore standby servers
- **Federation addon 4.0.23**
    - fix: refresh token expiration date can ben null
    - feat: Options to customize user registration process
    - Fix null pointer
    - New method to register users
    - feat: Registration process can be the initial step of a progressive profile
    - feat: support the response_mode=form_post
    - feat: Ability to configure refresh token timeout
    - Usage of expiration token timeout
    - Method to fetch all esso settings at onec
    - Fix null pointer
    - Update expires attribute in refresh token
    - Fixes fields without datatype
    - Fix generation of refresh token expiration claim
- **Role mining addon 4.0.1**
    - Fix Null pointer
    - Application is not required
    - Update war plugin
    - New performance engine
    - Adapt CI/CD
    - Update repositories
    - Remove duplicated entry in pom.xml
    - User C++ image
- **SCIM addon 4.0.4**
    - Fix patch of account object
- **LDAP plugin 4.0.4**
    - Multiple bug fixes
    - Fix login
    - Method to configure the LDAPS security level
- **PAM (only in Docker Hub) 1.4.88**
    - New image for http session in mode kiosk and not-kiosk
    - Option to open a wireguard tunnel
    - feat: option to maximize screen
    - fix: Click up windows key after losing focus
    - Fix keypad subtract key

- Fix transfer of file with UTF-8 characters in its name
- Fix session is closed after ten seconds

New releases 2026 May

Welcome everyone.

We are pleased to inform you that Soffid **new releases** are now available and we have updated our download page with new versions of the Soffid components.

Please note that in **Soffid 4**, you will only find the **Console** and **Syncserver** on our enterprise download page. Starting with this version 4, **Addons** and **Connectors** must be downloaded directly from the internal **marketplace** on the Licence and plugins page. For more information, please consult our online documentation.

Below is the list of the components and changes made since the previous version was published.

Soffid 4

Console 4.0.58 (from 54)

tick Searches were not working on the custom object pages, nor via the SCIM web service.
tick The database update service from version 3 to version 4 was not working for the SQL Server database.
tick The database update service from version 3 to version 4 failed when an agent did not have the Usage attribute defined.
tick When the Console was configured as the service provider for Soffid’s identity provider, it generated unused SAML paths in the metadata.xml file.
tick One of the indexes in the account table had an incorrect name (it was not being applied).
tick Some indexes in the database were not being created because their names exceeded the permitted length.

tick **Users of the SCIM web service must now have the new “webservice:user” authorisation.** New feature

tick An error that had already been handled in the code, indicating that a host searched for by IP address could not be found, has been ignored in the log.

tick Users who do not have the SOFFID_ADMIN role will no longer see the details of errors in the Console; instead, an identifier will be displayed so that administrators can look it up in the log. New feature

tick The SCIM web service was displaying folders to which the SCIM user did not have access.

tick New headers have been added to improve the security of web requests.

tick The console log has been shortened when the syncserver is not active.

Syncserver 4.0.35 (from 34)

tick New feature to clear the account password when the account is disabled and set the last password when the account is enabled again. New feature

Federation addon 4.0.29 (from 24)

tick New feature to set a custom list of holder groups for each service provider. New feature

tick When a user attempted to log in via ESSO and the login failed, if the “esso-failed-login” issue type was enabled, the issue would not be created and would not be logged.

tick **In the Identity Provider configuration, in the attribute “TLS PublicKey”, the “Upload PKCS12 file” button did not move forward to the PIN step.**

tick The PAM session would not start if the account belonged to the identity provider

tick Hide certain OIDC attributes in an OpenID POST response, as they were not part of the standard.

tick When a user was created in Soffid via self-provisioning by the Identity Provider, an error was thrown if the user had no additional attributes.

tick When a user connected to the Identity Provider via ESSO, if the machine had an IP address that could not be resolved by the DNS resolver, an error occurred.

tick For users who use ESSO and permission elevation, shared accounts are now cached on the Windows machine to speed up access and prevent service disruption when there is no internet connection.

tick The Kerberos login has been modified because it sometimes fails.

tick The service providers' impersonation functionality failed because a library update was missing.

tick New headers have been added to improve the security of web requests.

LDAP plugin 4.0.5 (from 4)

tick A maximum number of results has been added (it is a very high value).

New releases 2026 June

Welcome everyone.

We are pleased to inform you that Soffid **new releases** are now available and we have updated our download page with new versions of the Soffid components.

Please note that in **Soffid 4**, you will only find the **Console** and **Syncserver** on our enterprise download page. Starting with this version 4, **Addons** and **Connectors** must be downloaded directly from the internal **marketplace** on the Licence and plugins page. For more information, please consult our online documentation.

Below is the list of the components and changes made since the previous version was published.

Soffid 4

Console 4.0.64 (from 58)

tick Pagination has been added to the “Issues” page.
tick The new feature introduced last month has been updated so that users with the SOFFID_ADMIN role can view the full error trace. **New feature**
tick The performance of the “My applications” page has been improved, as in some cases it took too long to calculate the elements to be displayed. A new cache has been added to improve the user experience.
tick When a generic error occurred, it was not recorded in the log.
tick The performance of the search bar at the top has been improved, as in some cases it took too long to determine which items should be displayed.
tick We now have new options for sending logs to SIEM platforms. **New feature**

tick On “My Applications” page, if a user had access to an application via his user (no role or group), the application would not appear.

tick The pages from the “Identity self service” module (“My requests”, “My applications”, etc.) have been added to the Soffid search feature.

tick There was an error when generating the Soffid menu for some users, depending on their licence settings and associated products.

tick The Soffid notification engine (blue pop-ups in the top right-hand corner) has been adjusted from 10 to 30 seconds.

tick From now on, the geolocation service and the use of AI in scripts will be enabled by default if the AM or IRC modules have been activated. Consequently, the “Network Intelligence” page has been removed.. **New feature**

tick On the “Detected browsers” page, the “Locked” and “Removed” attributes are now optional.

tick On the “My account” page, the styles of the “Set password” and “Query password” pop-ups have been updated.

tick On the “Users” page, the attributes were not displaying correctly in read-only mode.

Syncserver 4.0.39 (from 35)

tick During the initialisation of an agent, the logs were being written to another log file.

tick On the “Syncserver monitoring” page, the “Agents task” list did not display the details or errors for the tasks.

tick The check to verify whether a role existed in a target system was not always carried out on a case-insensitive basis.

tick Updating the Kerberos settings would sometimes result in data being overwritten.

Federation addon 4.0.36 (from 29)

tick In the Soffid wizard, the AM option for provisioning OTPs was failing.

tick Some old IDP sessions were not being deleted; the deletion process has been modified so that they can now be removed.

tick New parameter for selecting the Soffid Authenticator dataset. **New feature**

tick New set of flower images for the Soffid Authenticator

tick New set of fish images for the Soffid Authenticator

tick Skip authentication error when the SAML SP asks for specific auth method

tick Some errors have been resolved where a service provider had no Level of Assurance selected.

tick Attributes of “transient id” type were not being sent correctly, even though this option was selected in the service provider.

tick Refresh tokens were not being generated correctly.

tick If the Kerberos token did not validate correctly, the browser used to display a 500 error; now it is ignored and the browser asks for a username and password.

New releases 2026 June

Welcome everyone.

We are pleased to inform you that Soffid **new releases** are now available and we have updated our download page with new versions of the Soffid components.

Please note that in **Soffid 4**, you will only find the **Console** and **Syncserver** on our enterprise download page. Starting with this version 4, **Addons** and **Connectors** must be downloaded directly from the internal **marketplace** on the Licence and plugins page. For more information, please consult our online documentation.

Below is the list of the components and changes made since the previous version was published.

Soffid 4

Console 4.0.67 (from 64)

tick A new generic property “removeDisabledObjects” has been created which can be used in all agents, on the “user” and “accounts” objects. By default, its value is “false”; you only need to create it if it requires the “true” value. **New feature**
tick A new issue “user-login-limit” has been created to manage situations where an OpenID service provider exceeds the threshold for requests per minute. **New feature**
tick In some versions, when installing Soffid for the first time, the initial popup was failing
tick On the “Issues” page, all issues were being generated with the number ‘1’; the counter now works correctly.
tick Sometimes the GeoIP service would return the “nan” value and cause unhandled errors
tick The “View Tasks” option on the “Sync server monitoring” page was having performance issues, and the data displayed was incorrect
tick A new parameter “SOFFID_DISABLE_GEOIP” has been added for use in the Docker Console configuration in environments where there is no internet connection or where this service is not required. **Bookstack**

tick Security fix: users of Windows systems with the ESSO component were able to open applications with administrator permissions even if they did not have them

tick New methods have been added to the Soffid API to change a password with a specific expiration date. **Soffid API**

tick On the “Password policy” page, if the same “Forbidden words” was entered twice, an error would occur when changing the password

tick From this version onwards, the “Mail domains” page will be accessible with the AM and PAM licences (previously it was only available in IGA)

Federation addon 4.0.37 (from 36)

tick A new “Device posture” feature has been added to allow SSO to be used only if devices comply with policies regarding antivirus software, the latest updates and other settings. **New feature**

tick It is no longer possible to change the look and feel of virtual identity providers.

tick New limit to prevent OpenID service providers from exceeding a threshold for requests per minute. **New feature**

Admin addon 4.0.6 (from 5)

tick Update this addon to use of AI in scripts by default if the AM or IRC modules have been activated. **New feature**

tick Improve script generation by adding more detail to the generated script

tick The script size limit has been increased from 40,000 to 256,000 characters.

LDAP plugin 4.0.6 (from 5)

tick Prevent an error when retrieving an entryUUID with only whitespace characters

REST plugin 4.0.7 (from 6)

tick The “Token” authentication type was not working correctly.

SAP plugin 4.0.4 (from 3)

tick If you disable an SAP account in Soffid, it will also be disabled in SAP

Shell plugin 4.0.3 (from 2)

tick When selecting a Shell agent and attempting to save, an error was displayed because there was an internal error with the password field

Windows plugin 6.0.15 (from 14)

2026 august

Header

New releases 2026 August

Welcome everyone.

We are pleased to inform you that Soffid **new releases** are now available and we have updated our download page with new versions of the Soffid components.

Please note that in **Soffid 4**, you will only find the **Console** and **Syncserver** on our enterprise download page. Starting with this version 4, **Addons** and **Connectors** must be downloaded directly from the internal **marketplace** on the Licence and plugins page. For more information, please consult our online documentation.

Below is the list of the components and changes made since the previous version was published.

Soffid 4

Console 4.0.72 (from 67)

tick In the network discovery process, the search for service accounts has been improved to enable the detection of accounts with different naming conventions
tick On the “Sync server monitoring” page, a new option has been added to send each of the logs to the syslog that has been configured. **Bookstack**
tick On the “Password vault” page, there was an error when configuring the access permissions (owners, managers and sso users) for the folders
tick Now, in some agents, when accounts are retrieved from the target system, the externalId attribute will be updated

tick On the “Search in PAM recordings” page, the process for downloading video recordings has been improved.

tick The mechanism for retrieving Soffid parameters (Soffid parameter page) for proxy syncservers has been changed, as they were not being refreshed until the system was restarted. Now, if a parameter value is changed, that value will be available for the next request.

tick In the attribute mapping properties on the “Agents” page, all the ticked boxes were displayed even if they were not actually ticked.

tick On the “Sync server monitoring” page, a new option has been added to download a full log.

Bookstack

tick A loading indicator has been added to the “Search in PAM recordings” page while the browser downloads the videos.

tick The method for checking the “user:group:delete” authorisation has been fixed, this authorisation allows you to remove a group from a user.

tick The performance of the search box in the top bar has been improved.

tick When a reconcile process detects that a new account already exists in Soffid with the same externalId, an error will now be returned.

tick When a reconcile process detects that a new role already exists in Soffid with the same externalId, an error will now be returned.

tick On the “Issue policies” page, the quick search was not working.

tick On the “Search PAM recordings” page, depending on the screen resolution, some videos used to be cropped; they will now be scaled so that they are displayed 100% within the page.

tick Until now, the “externalId” field was for internal use only and was not displayed; it can now be viewed on the accounts screen.

Syncserver 4.0.43 (from 39)

tick Shared accounts used by agents to obtain the agent’s password will now always be forced to remain active.

tick In environments where there were multiple instances of the same syncserver, when one instance was restarted, it would detect the processes running on other instances as an error and display the message “Server restarted during execution”, but the process would continue to run correctly on its own syncserver instance

tick When an agent was deactivated, its tasks were deleted, and this process could take quite a long time; it now runs asynchronously, allowing agents to be deactivated and reactivated quickly.

tick Agents will now use domain passwords of the “Password vault” on Windows Server agents.

tick In environments where there were several instances of the same synchronisation server, these had different URLs and caused performance issues; now they will all have the same URL.

tick Improve method to set domain password in agents

tick On the “Sync server monitoring” page, a new option has been added to send each of the logs to the syslog that has been configured. **Bookstack**

tick The update of the externalId attribute has been added to reconciliations, for both roles and accounts.

New releases 2026 September

Welcome everyone.

We are pleased to inform you that Soffid **new releases** are now available and we have updated our download page with new versions of the Soffid components.

Please note that in **Soffid 4**, you will only find the **Console** and **Syncserver** on our enterprise download page. Starting with this version 4, **Addons** and **Connectors** must be downloaded directly from the internal **marketplace** on the Licence and plugins page. For more information, please consult our online documentation.

Below is the list of the components and changes made since the previous version was published.

Soffid 4

Console 4.0.75 (from 72)

tick On the Information systems page, it was not possible to delete an information system when there were roles marked as deleted.
tick A new method has been added to suggest roles that can be assigned to a user. **New feature**
tick In the network discovery process, the detection of service accounts now also supports user@domain.com
tick When setting up a new application via the Soffid wizard, it wasn't asking for a username and password, so I couldn't complete the process.
tick Using the delta changes feature, when retrieving an account, its previous status was not being fetched correctly.

tick It sometimes displayed an error when checking whether a password was synchronised, even though no such password existed.

tick On the PAM session recording page, the styling of the video container has been improved.

tick On the agents page, a generic method has been added to identify the Boolean columns in the tables, in order to enable data filtering.

tick On the Roles page (and in the Information systems page), it was not possible to delete a role if it contained any outstanding notifications.

tick The authorisations for users accessing the Soffid web service were not being refreshed; there is now a cache that is updated regularly.

Syncserver 4.0.48 (from 43)

tick When it was running on IdP across more than one instance, communication issues would sometimes arise.

tick The deltas generated during synchronisation and reconciliation were not being saved in the database.

tick Do not search AD accounts in another AD.

tick The synchronisation of temporary permissions was failing, both when adding and removing them.

tick To avoid overloading the remote sync servers with too many Java threads, the number has been limited to a maximum of 100 concurrent threads.

tick Several nullPointerExceptions that did not add any value to the log have been removed.

tick Audit information has been added when granting temporary permissions from a PAM policy

tick When an attempt to update a role failed, if it had inherited roles, those roles were updated, leaving the role inconsistent.

tick To improve communication with remote sync servers, response timeouts have been added for requests.

Federation addon 4.0.41 (from 40)

tick During user authentication, display an error message in the log file when the idp is not trusted.

tick A button has been added to the attribute policies page to simulate the attributes generated for a user and a service provider. **New feature**

tick Captcha feature has been added to the self-registration page.

tick If there are several external identity providers, a script has been added to the external identity providers to determine whether they are valid for authentication. **New feature**

tick The UID generated by Soffid via the SP script was not being sent to some legacy CAS web services.

Admin addon 4.0.6.1 (from 4.0.6)
