2026-05-21 New feature: CSV connector in Soffid 4

The new feature

> The first version of the "**CSV connector**" has been released in Soffid 4. This connector only includes the “**Customisable CSV file**” agent. In this version, this agent is used to **generate a CSV file** as part of the Soffid synchronisation engine.

Bear in mind

Please note the following points:

- The "Customisable CSV file" agent is used to **synchronice**, not for load authoritative o reconcile.
- **Users** who need to be created in the CSV file must **have** an **account** with that **agent**.
- Please note the **location** where the file will be created; its configuration will depend on the **operating system** and the type of Soffid **architecture/installation**

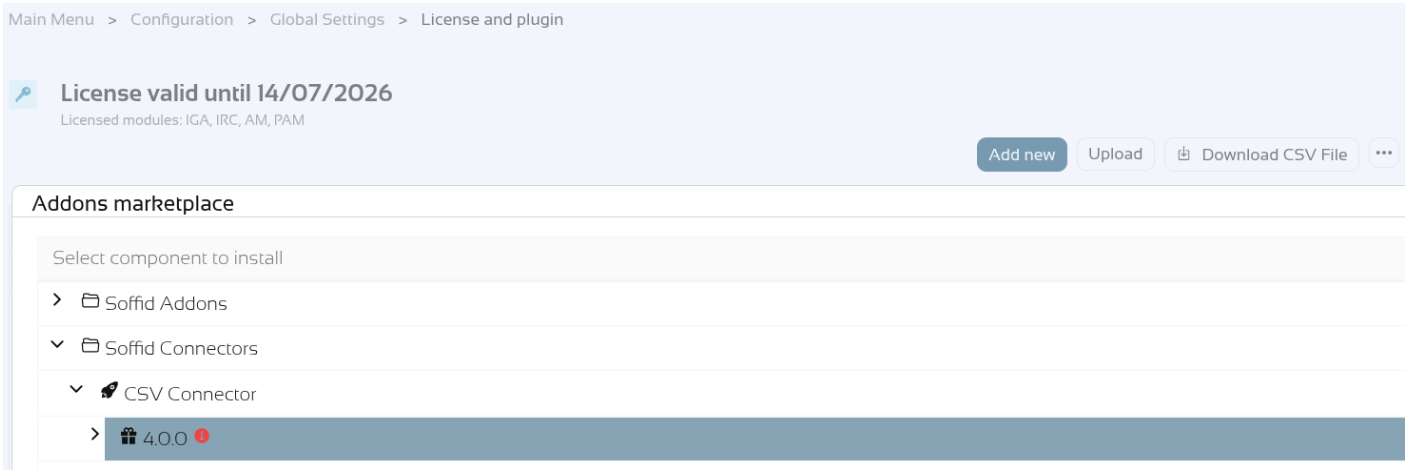

How to configure it?

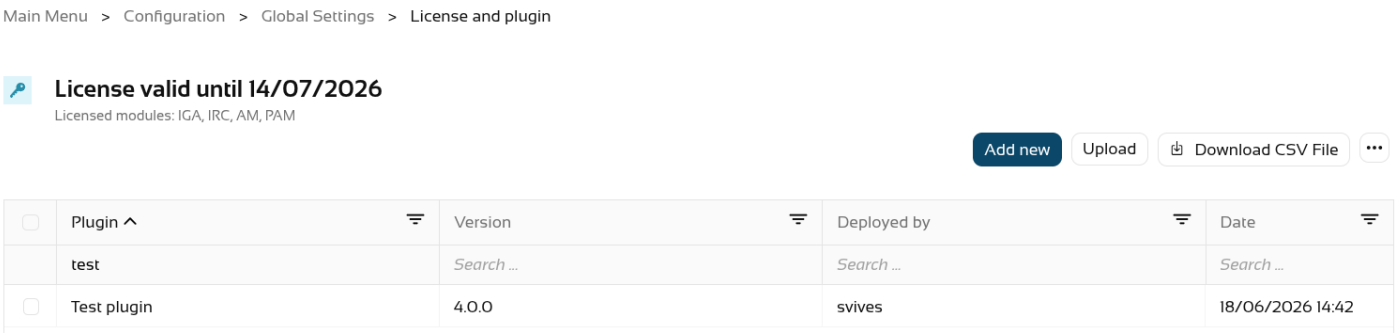

The following **components** must be installed:

- CSV plugin 4.0.0 (or higher)

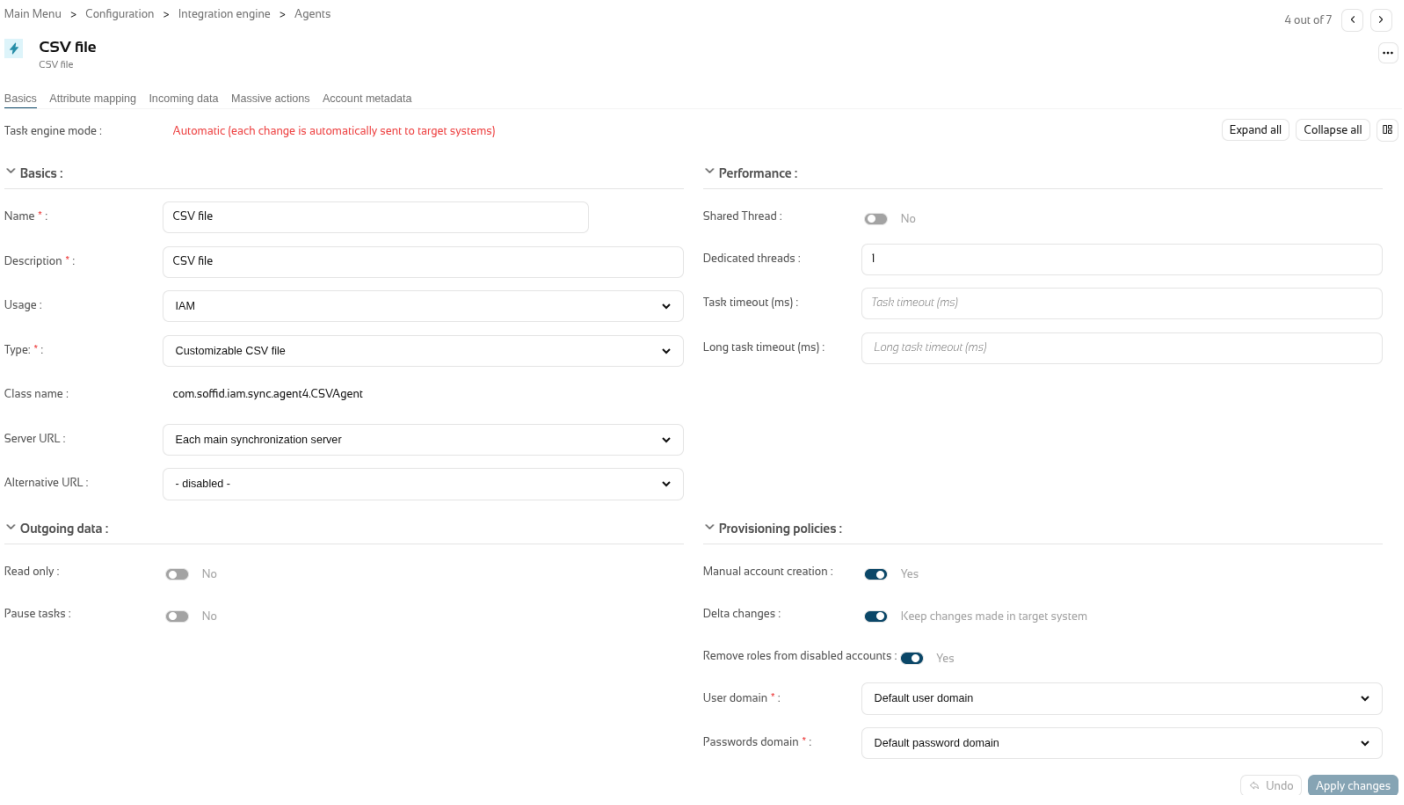

Let's look at an example

Step 1: install the **CSV plugin** from the marketplace (Add new button) in the License and plugin page. The name of the connector is "Test plugin".

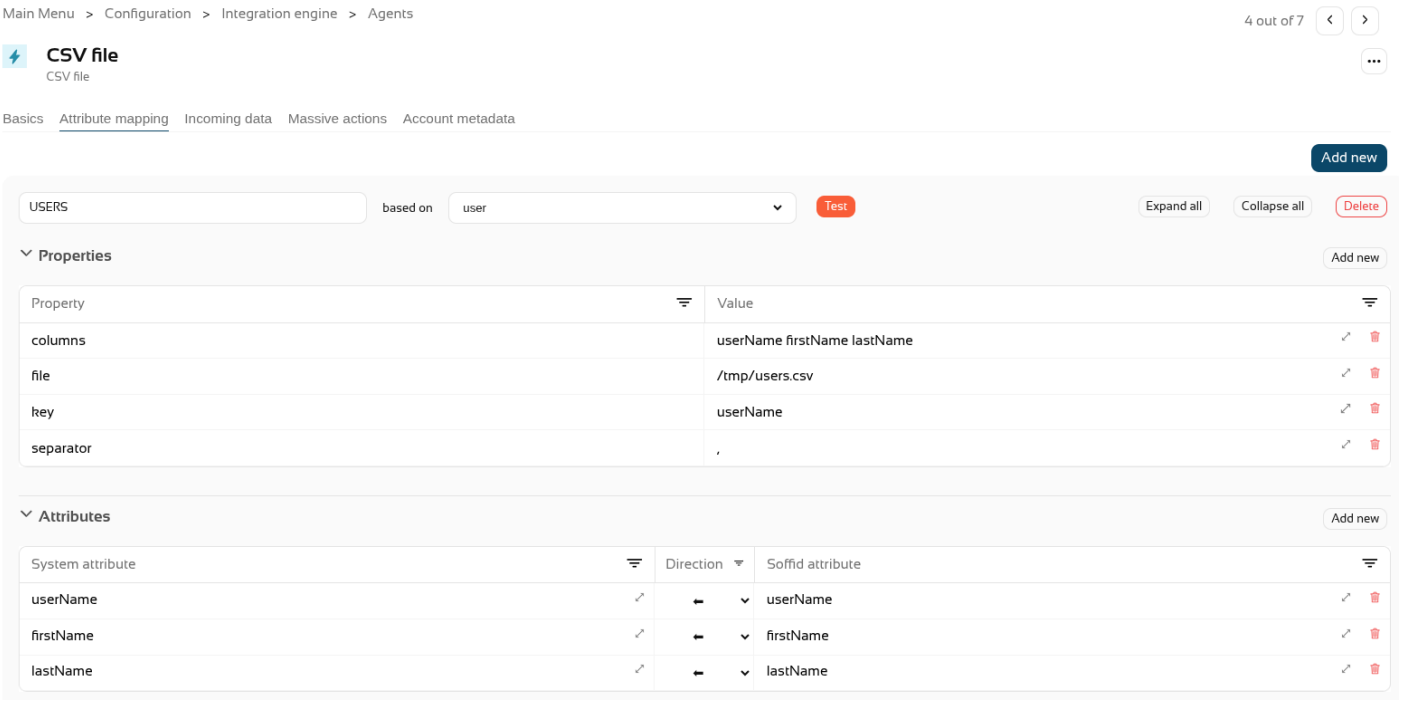

Step 2: **create** an **agent** of the "Customisable CSV file" type.

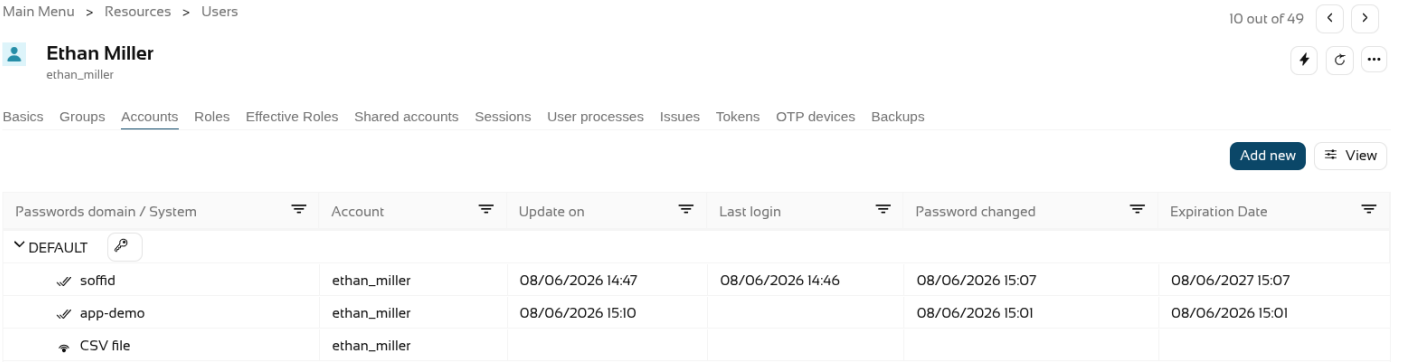

Step 3: **configure** the agent with the **mappins** you need (in the "Attribute mapping" tab).

> For further information on how to configure this agent, please refer to the CSV connector in Soffid 4 page.

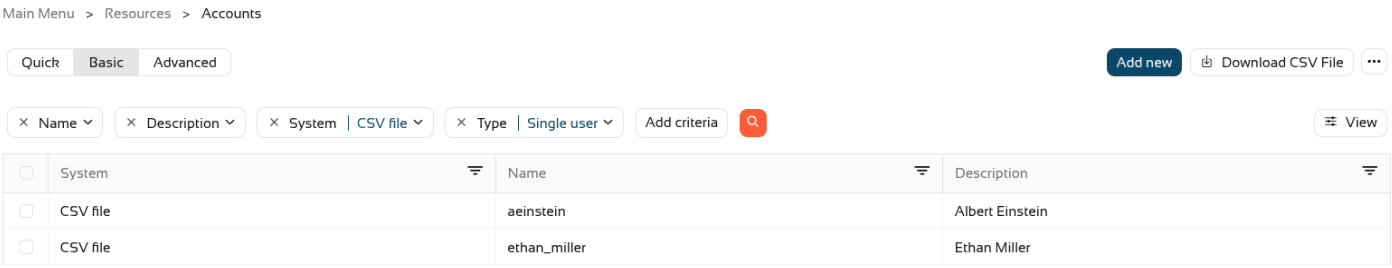

Step 4. Create **CSV accounts** for users.

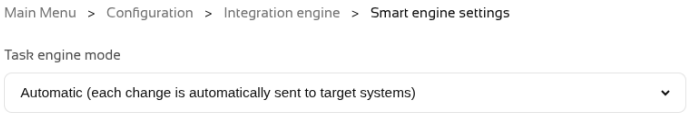

Step 5. The **accounts** created will have synchronised automatically as the **engine** is set to automatic and the **agent** is in write mode, and it is active in the **monitoring**.

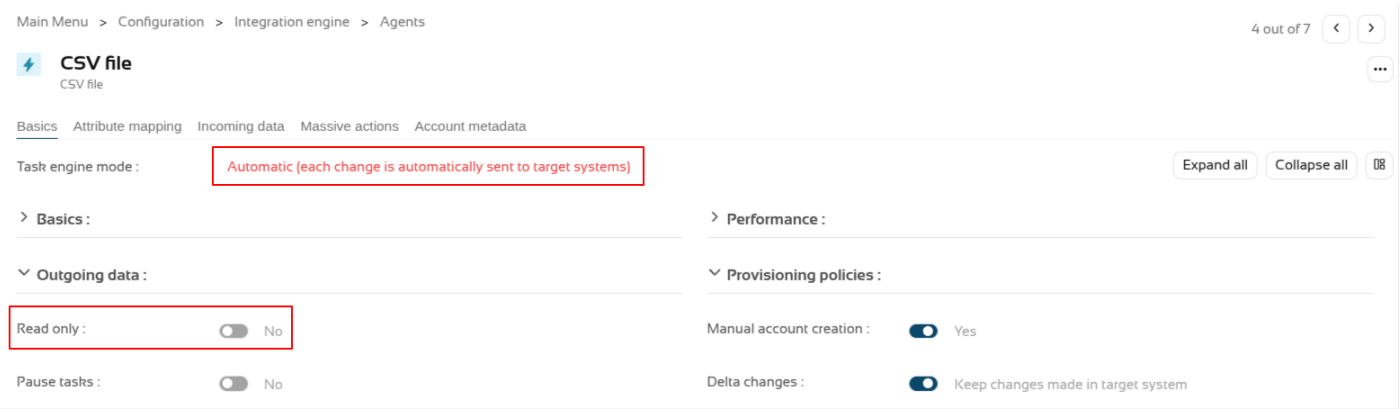

The accounts.

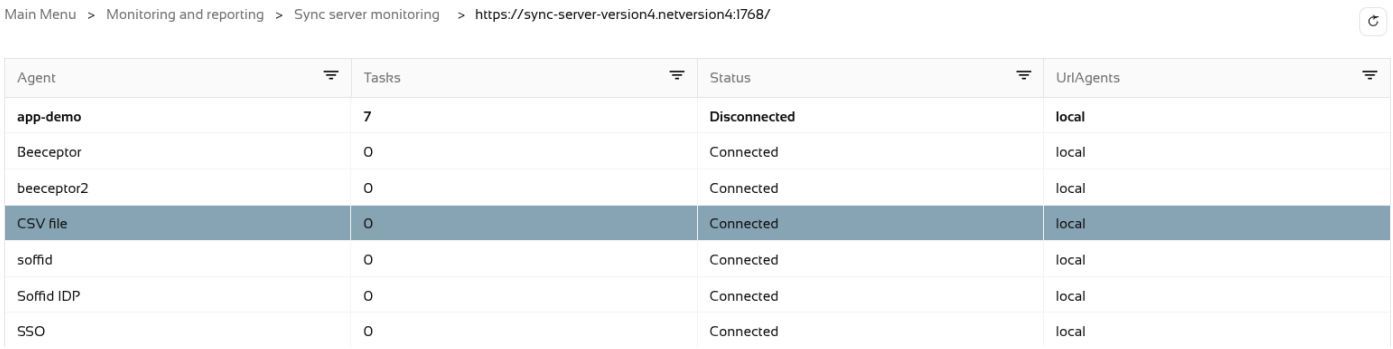

The engine.

The agent.

And the monitoring.

Step 6. Now let’s **check** the CSV file. It was configured in the "/tmp/users.csv" path of the container.

```
root@sync-server-version4:/# cat /tmp/users.csv
"firstName","lastName","userName"
"Albert","Einstein","aeinstein"
"Ethan","Miller","ethan_miller"
```
