

# 2026-05-31 New feature: new authorization for the SCIM webservice

## The new feature

From now on, all **users** used to access the **SCIM webservice** will **require** the new "**webservice:user**" authorisation.

## Bear in mind

Please note the following points:

- Users with the **SOFFID\_ADMIN** role **already have** this authorisation inherited by inheritance.
- After updating Soffid, you will need to grant this authorisation to users who are not administrators and who are already using the SCIM web service.

## How to configure it?

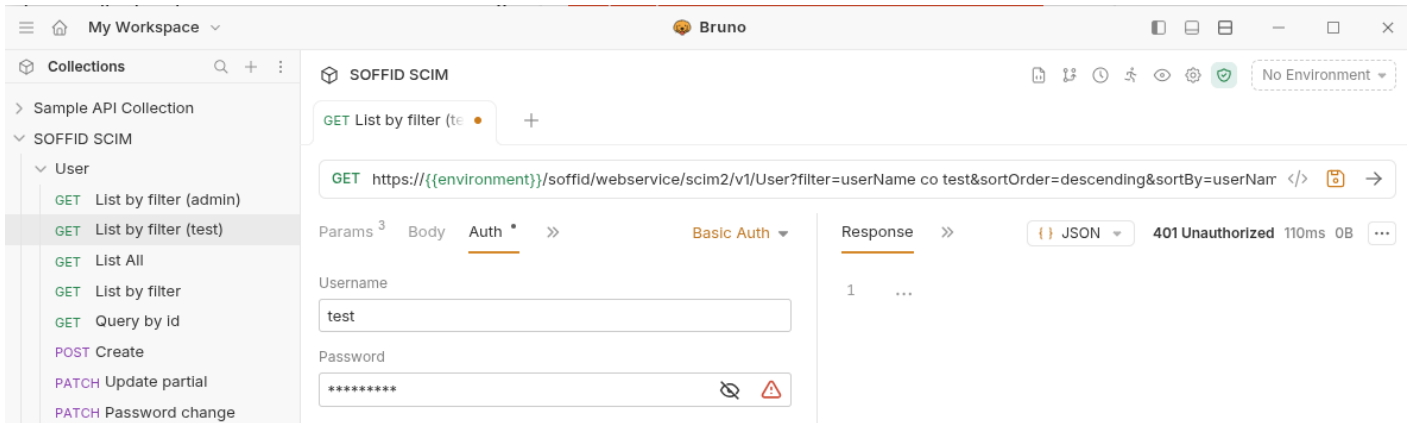

The following **components** must be installed:

- Console 4.0.58 (or higher)

## Let's look at an example

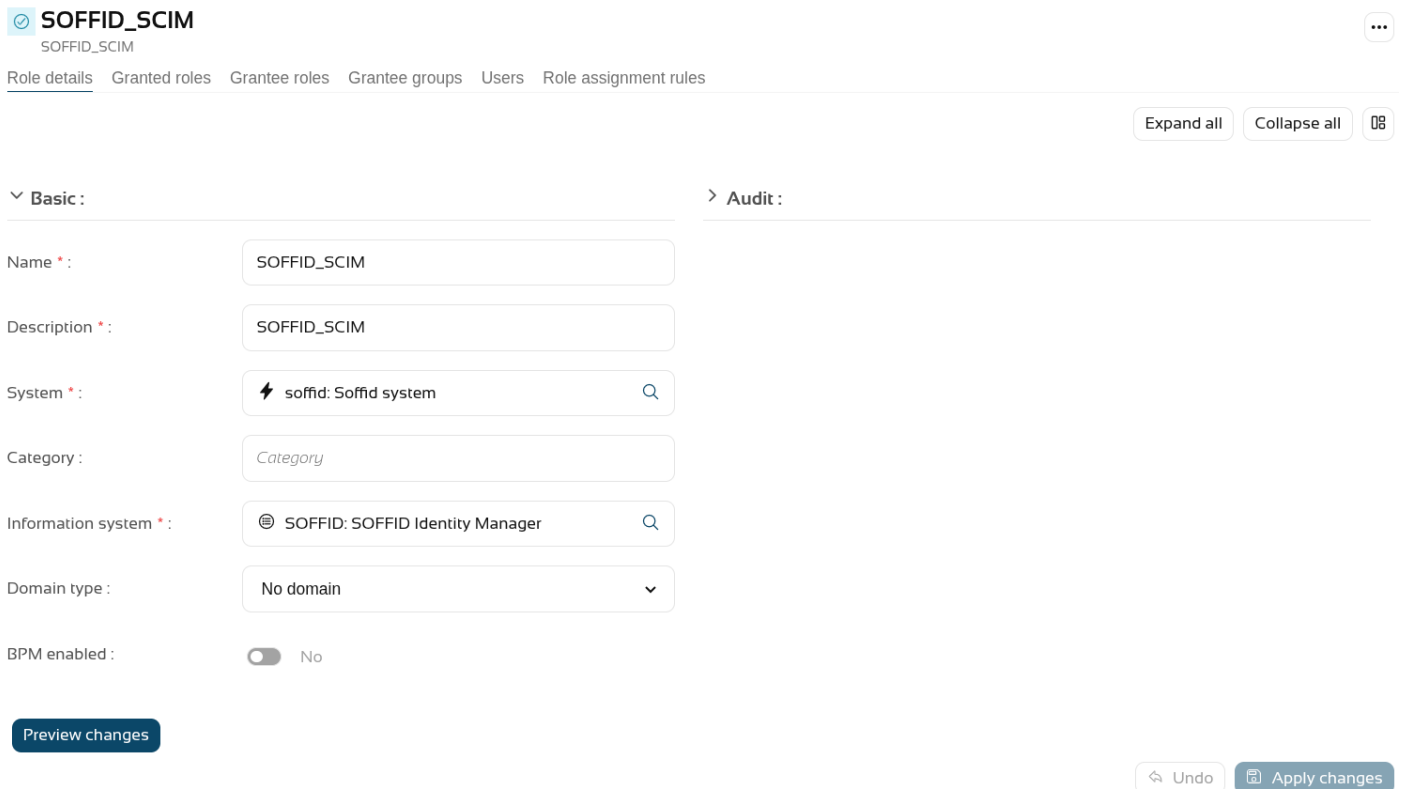

For this example, we will be using the Bruno application; for further information, please see [this page Testing Tool](#).

First, let's check that the **"Test"** user we were using in the SCIM web service no longer has access, see the **"401 Unauthorized"** error.

On the **Roles page**, we are going to create a new role, **"SOFFID\_SCIM"**, and then assign the new authorisation to it.

Main Menu > Resources > Roles

On the **Authorisations page**, we assign the new authorisation **"webservice:user"** to it.

[Download CSV File](#) [Import](#)

Scope ^	Name	Description	Roles
<i>Search ...</i>	<i>Search ...</i>	<i>Search ...</i>	scim
Soffid	webservice:user	Use console web services	SOFFID_SCIM@soffid
Users	user:query	View users	SOFFID_SCIM@soffid; SOFFID_USER@...

The final step is to **grant** the **SOFFID\_SCIM** role to the **user**.

**tesName testSurname**  
test

[⚡](#) [🔄](#) [\\*](#) [⋮](#)

Basics Groups Accounts Roles Effective Roles Shared accounts Sessions User processes Issues Tokens OTP devices Backups

[Add new](#) [Delete Role](#) [Import](#) [Download CSV File](#) [View](#)

<input type="checkbox"/>	Role ^	System	Account	Information system	Start date	Domain value	Holder group
<input checked="" type="checkbox"/>	SOFFID_SCIM	soffid	test	SOFFID	18/06/2026		
<input type="checkbox"/>	SOFFID_USER	soffid	test	SOFFID	18/06/2026		

Now, when we query the web service, it returns results.
