2026-06-02 New feature: syslog with new protocols

The new feature

> Until now, when we enabled the sending of logs via syslog to a SIEM tool, the only **protocol** available was **UDP** on port 514; now, **TCP** and **SSL** protocols have been added, and we also allow you to **configure** the **port** instead of using the default settings.

Bear in mind

Please note the following points:

- Customers who have **already configured** syslog will continue to **use it as before**.
- Configuration is done through **parameters**; you can check them on the Soffid Parameters page.
- Once you have **created/modified/removed** the **parameters**, there is **no need to restart**.

How to configure it?

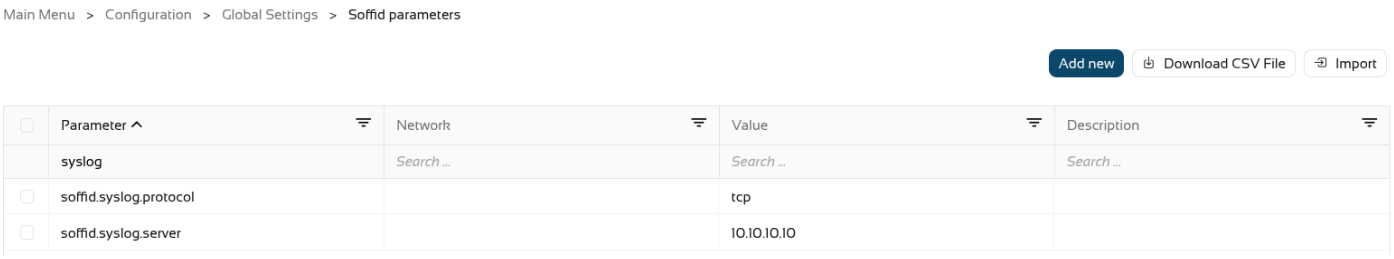

The following **components** must be installed:

- Console 4.0.62 (or higher)

Let's look at an example

Let’s follow these steps.

- Open the **Console**.
- Next, go to the **Soffid parameters** page.
- Create the next parameters:
