2026-07-08 New feature: new property removeDisabledObjects

The new feature

> A new generic **property** “**removeDisabledObjects**” has been created which can be used in all agents, on the “**user**” and “**accounts**” objects. By default, its value is “false”.

Bear in mind

Please note the following points:

- From this version onwards, the property will always be **used internally**; if it is **not defined**, it will take the **default value** of "false".
- This property can be **used for** synchronising **users** and **accounts**.

> For more informatio you can check the Windows Connector page.

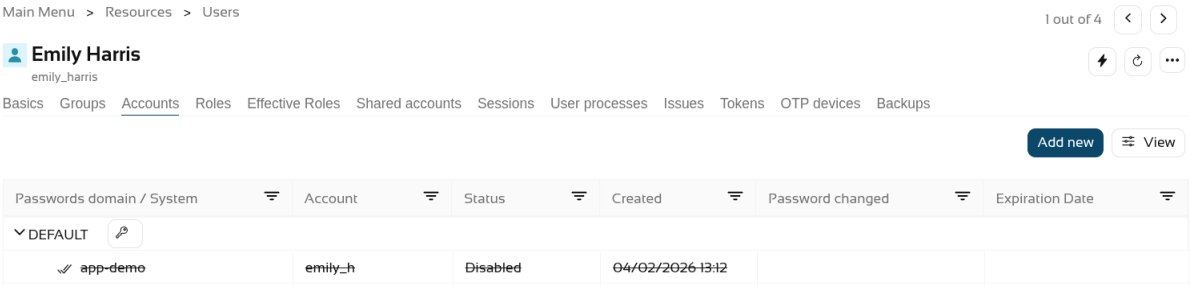

How to configure it?

The following **components** must be installed:

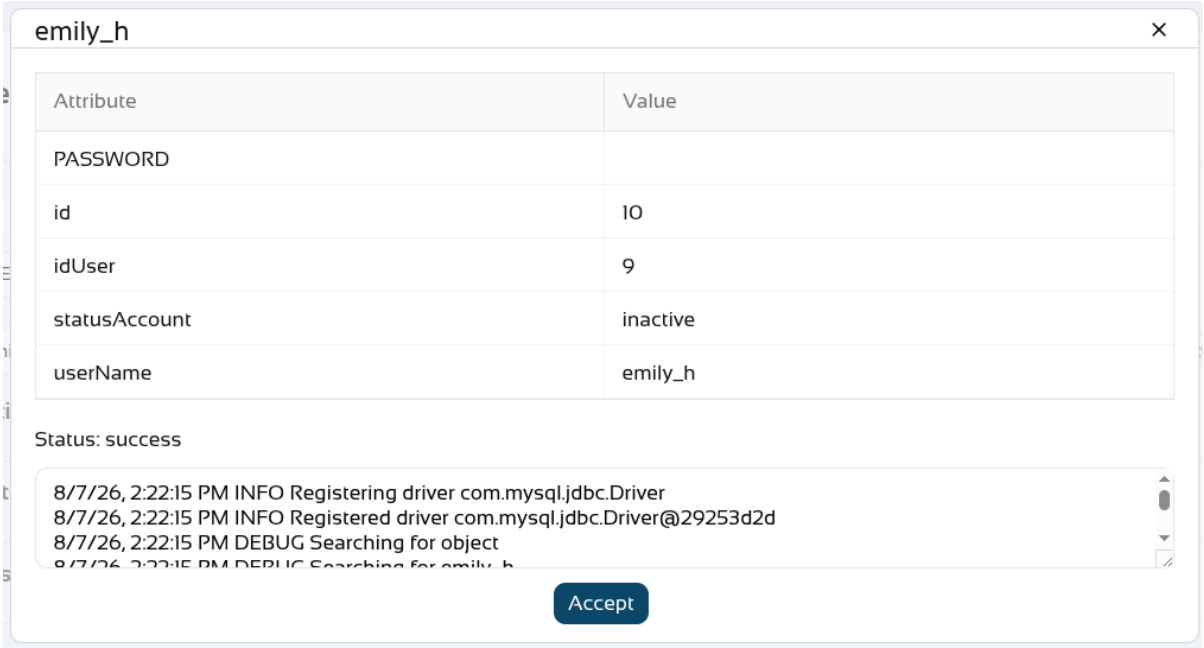

- Console 4.0.67 (or higher)
- Syncserver 4.0.39 (or higher)

Let's look at an example

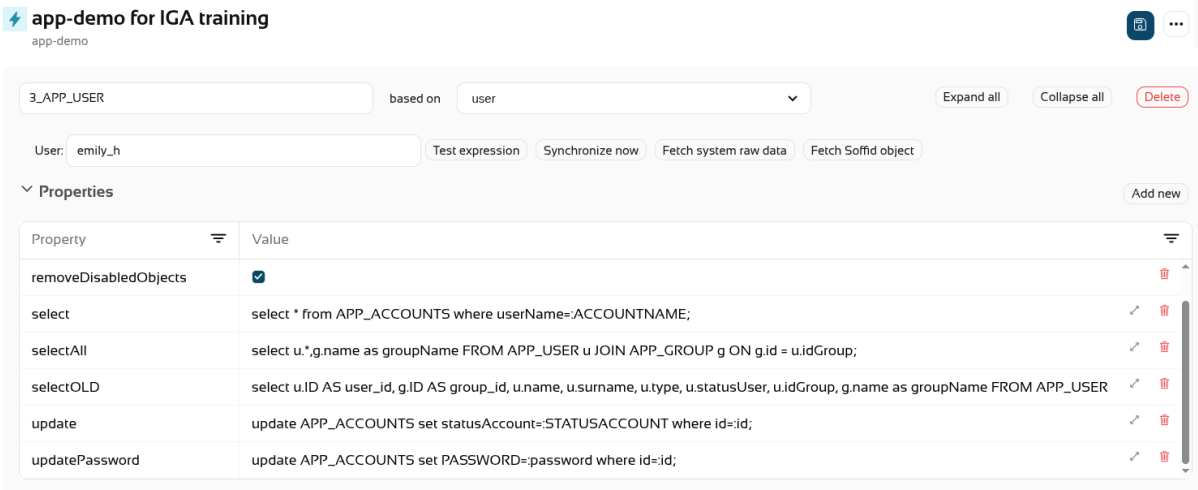

We have a **disabled account** on Soffid.

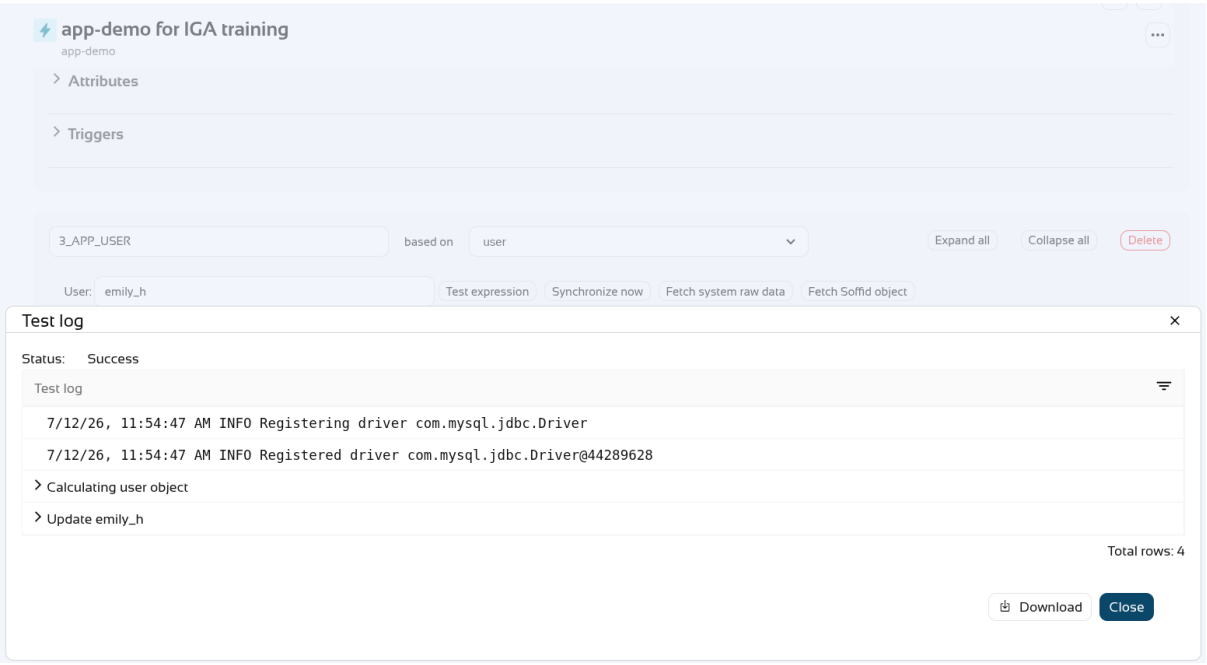

The **account exists** as inactive in the final system

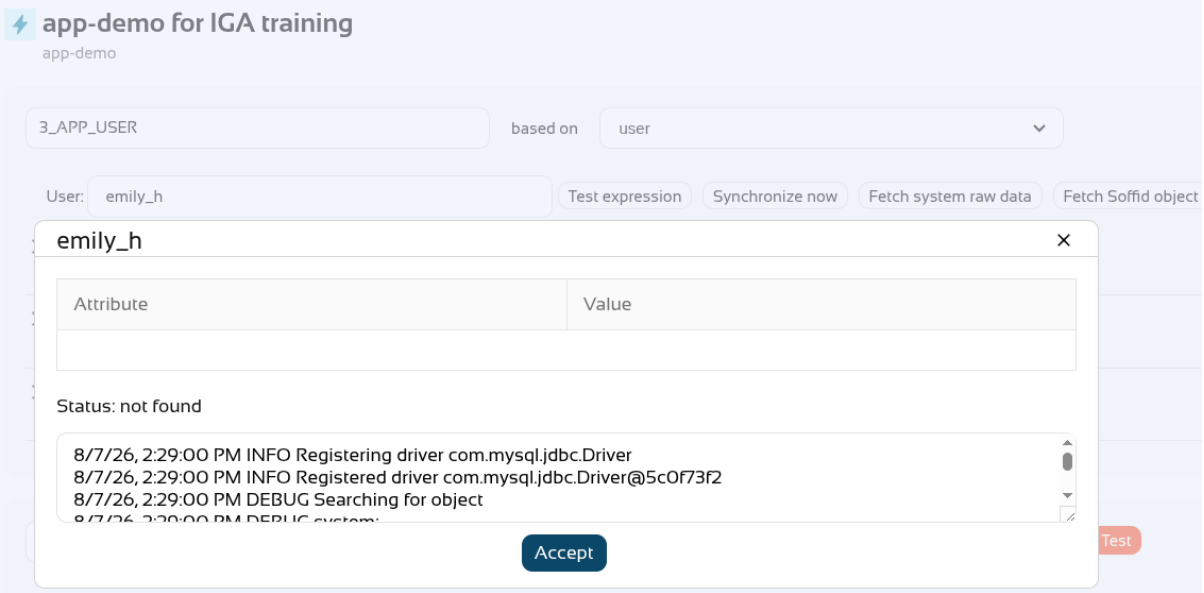

We set the **removeDisableObject** property

We **synchronise** the **changes** with the final system.

Finally, the account has been **deleted** from the final system.
