

2026-09-30 New feature: launcher clipboard update

The new feature

The use of the **clipboard** in the **launcher** has been **drastically improved**. It is now possible to copy and paste various formats in both directions: plain and rich text, as well as images and graphics

Bear in mind

Please note the following points:

- This functionality is **generic** and applies to all **sessions types**.
- **Copy** and **paste** works in **both directions**.
- You can copy plain and rich text (UTF-8, STRING, text/plain, text/html).
- You can copy images and graphics (PNG, BMP, JPG and JPEG).

How to configure it?

The following **components** must be installed:

- PAM launcher 1.4.91 (or higher)
- PAM store 1.4.91 (or higher)
- Session types in the last version (pasr images).

Let's look at an example

Example 1: copy text and html text

Start a windows connection with the launcher.

We open the Soffid.com web page.

Now we can copy a text.

And finally we paste the value in our editor.

Example 1: copy an image

Start a windows connection with the launcher.

Copy an image.

You can now see an information box indicating that the image is been copied.

Now we can paste in our environment.

Revision #2
