

2026-09-30 New feature: select external IdP using script

The new feature

If there are **several external identity providers**, a **script** has been added to the external identity providers to **determine** whether they are **valid** for authentication.

Bear in mind

Please note the following points:

- If the **script** is **empty**, this logic is **ignored**.
- Only when the script returns "**false**" will this **identity provider not** be **displayed** in the list of options on the login screen.

How to configure it?

The following **components** must be installed:

- Federation addon 4.0.41 (or higher)

Let's look at an example

First of all, we have **several external IdPs**.

Identity providers	
▼ Federation	
▼ SOFFID	
➤ TestIDP - TestIDP	
➤ http://google.com - Google	
➤ http://facebook.com - Facebook	
➤ http://linkedin.com - LinkedIn	

We can now see in Soffid IdP that authentication for **internal users** uses **external providers**.

Adaptive authentication

Description *

Internal users

Condition *

user!=null && "I".equals(user.userType)

Always ask for credentials

☐ No

First authentic	Password	Kerberos	External Id	OTP	Email	SMS	PIN	Certificate	FIDO	Push
Password	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐
Kerberos		☐	☐	☐	☐	☐	☐	☐	☐	☐
External I...			☒							
OTP				☐	☐	☐	☐	☐	☐	☐
Email					☐	☐	☐	☐	☐	☐
SMS						☐	☐	☐	☐	☐
PIN							☐	☐	☐	☐
Certificate								☐	☐	☐
FIDO									☐	☐
Push										☐

When we try to log in, a list of **all** the **options** appears.

Please, identify yourself.

User name:

admin

[Change user name](#)

-

- 

A service provider from anonymous needs to authenticate you.

We have now decided that **one of the external IdPs is not valid for internal users.**

**Google**

http://google.com

Expand all

Collapse all

▼ Identification

IdP type *

Google

Identifier

http://google.com

Name

Google

test

Contact

test

> Service configuration

[Click here to obtain a client id and client secret](#)

▼ Login rules

User regular expression

Regular expression to detect users of this identity provider

Condition to enable this identity provider

user!=null && !"l".equals(user.userType);

Now, when accessing an SP, it will **no longer appear** in the list.

Please, identify yourself.
