Console log

Description

The Console log screen displays an extract of the console logs for the current day.

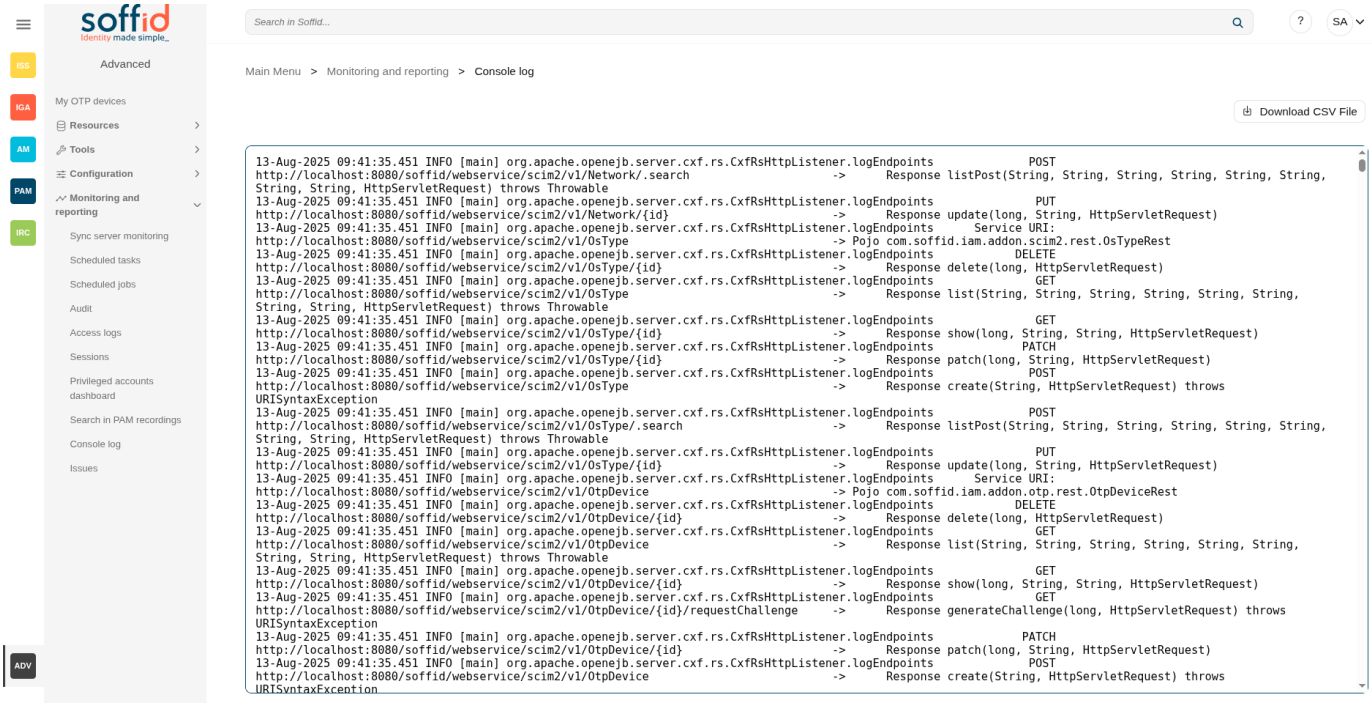

The log file is located in the Console directory, but in docker or kubernetes installations it is faster to perform initial queries on this screen.

If you have more than one console in your environment, each console only displays its own logs.

The log rotates every day and only logs from the same day can be viewed. To view previous days, access the system folder (/opt/soffid/iam-console-4/logs/).

2026-05-31 New feature: hidden stack tracers

Screen overview

Related objects

- Sync server monitoring : to view the syncserver logs
- Audit : to view the audit information of the Soffid objects

Actions

Download CSV file	Allows you to download the log file .
