Digital certificates (addon federation)

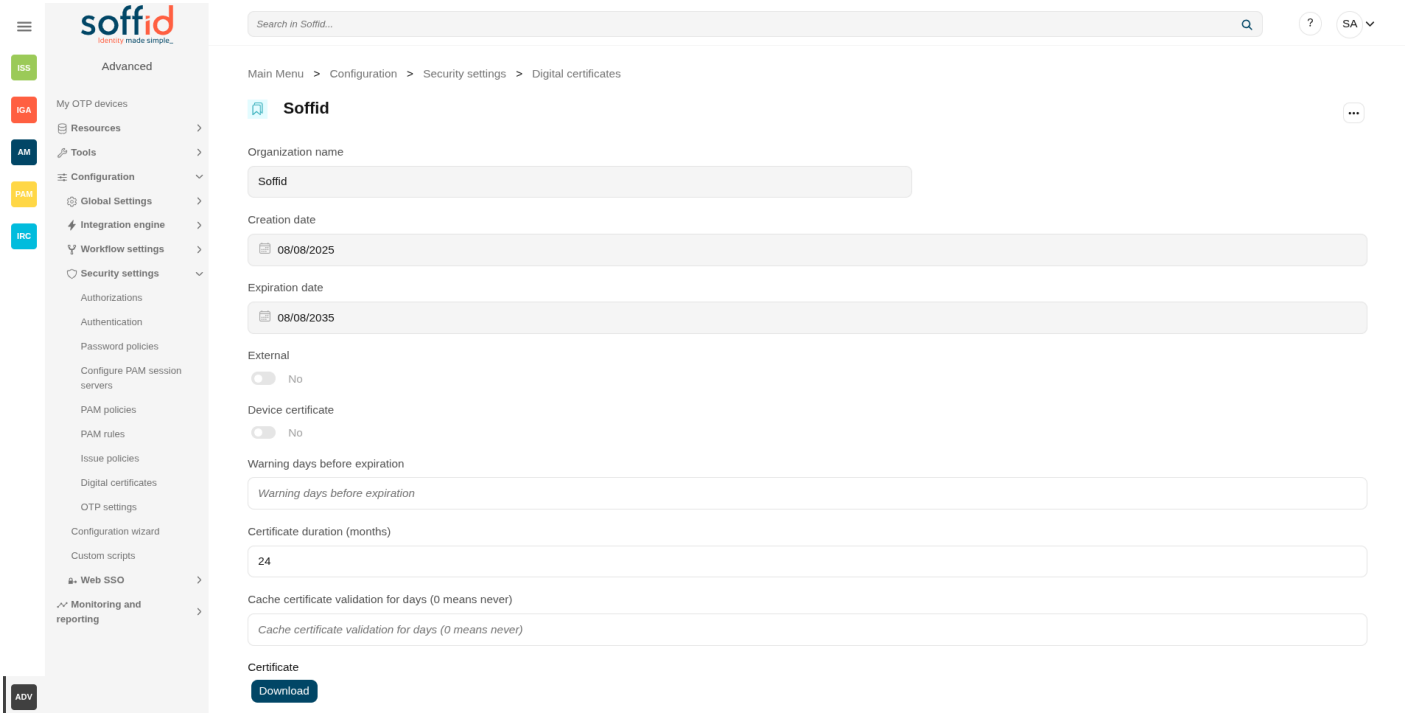

Definition

> Soffid includes Digital certificate functionality as a security enhancement. You could add new Digital certificates, internal or external.

If you select the external certificate, you could add a valid certificate to Soffid; If you select the internal certificate, Soffidl will generate a valid certificate.

Screen overview

Related objects

- Identity providers: certificates can be used as two-factor authentication

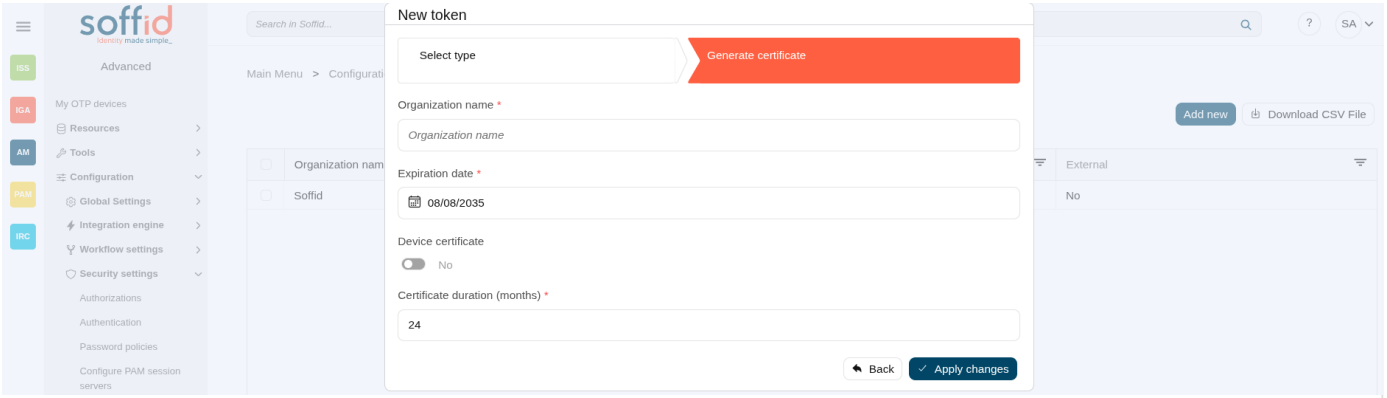

Standard attributes

Internal

- **Organization name**: organization name
- **Expiration date**: referring to the root certificate.
- **Device certificate**: Indicates if the certificate is for a device
- **Certificate duration (months)**: Referring to users' certificates.

Image

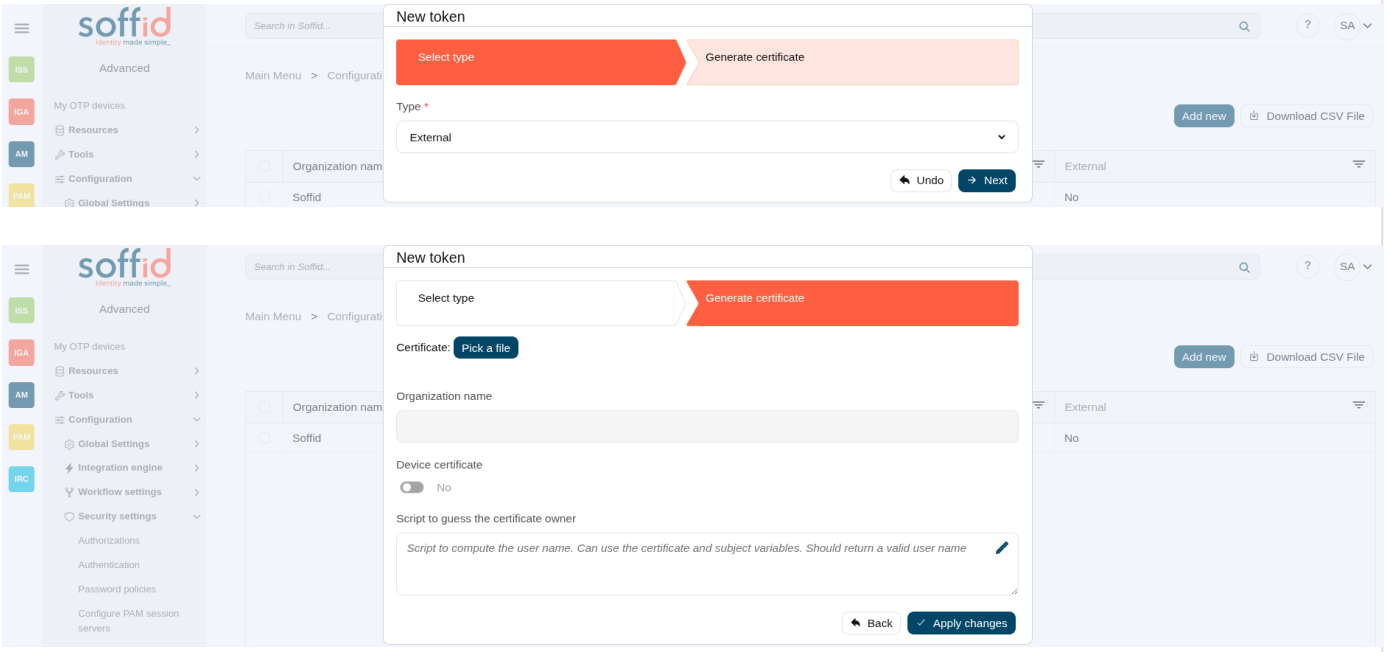

External

- **Certificate:** root of the certification authority (pem file).
- **Organization name**: organization name (retrieved from the certificate).
- **Device certificate**: indicates if the certificate is for a device.
- **Script to guess the certificate owner**: script to compute the user name. Can use the certificate and subject variables. Should return a valid user name.
