My accounts

Description

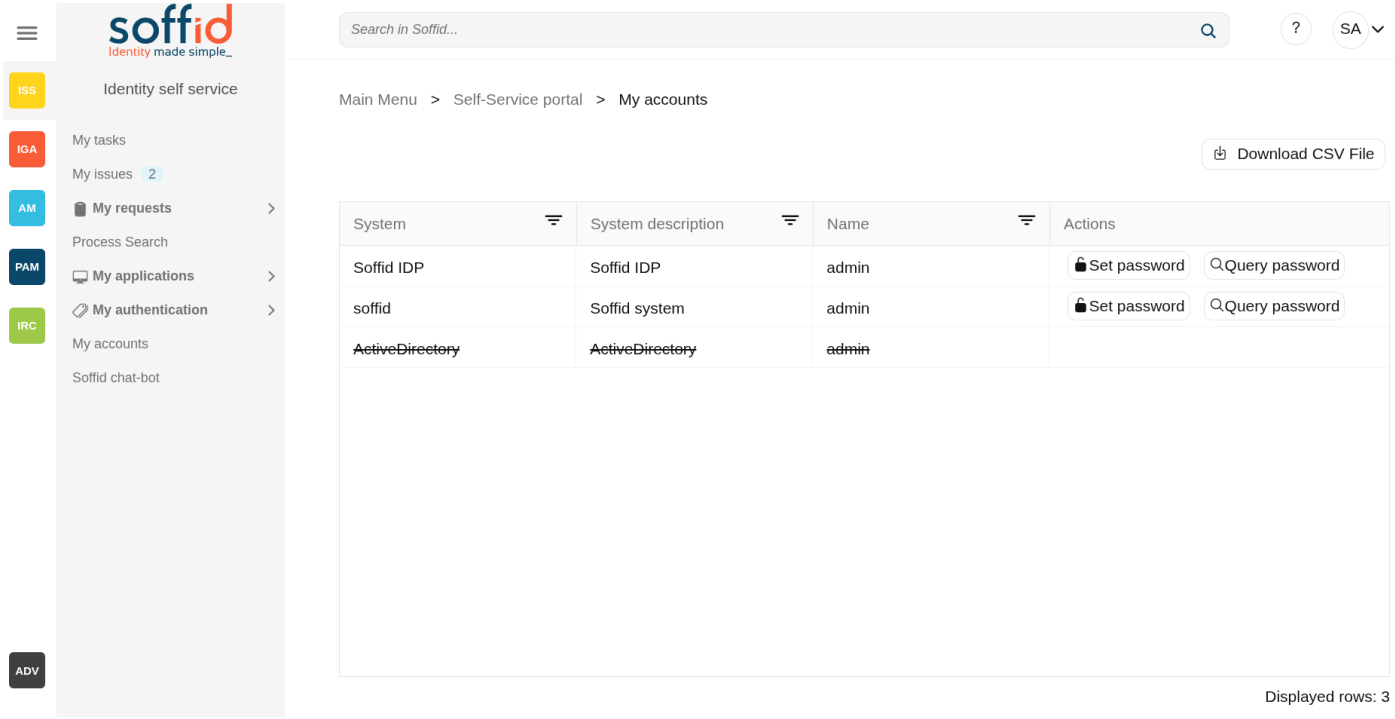

My Account is a part of the Identity self service that allows end-users to access and manage their personal accounts.

That option displays all personal accounts for each user and allows you to set and/or view the password for each account if they have been enabled by configuration.

The accounts that are displayed are those belonging to Soffid's own systems. For external systems, only accounts belonging to active systems are displayed. If an external system (agent in Soffid) is disabled, the account will not be displayed on this page.

Disabled accounts are displayed, but it is not allowed to set or view the password.
