My requests

Description

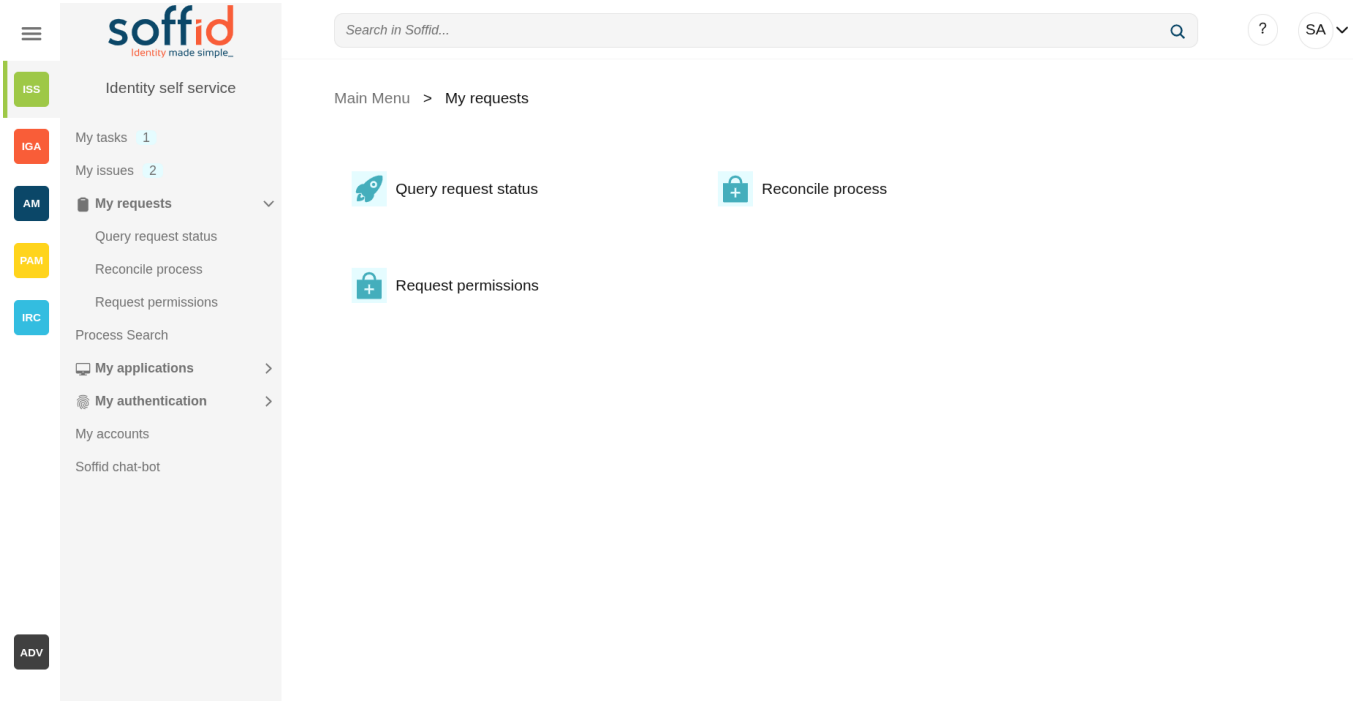

> Soffid provides a complete workflow engine that allows you to incorporate business processes or define new business processes as needed. End-users with the appropriate permissions will be able to request these processes. You can visit Self service portal examples page for more information.

My request screen allows to users:

- On the one hand, in the Query request status screen the user can consult the processes they have executed and view the process details and status.
- On the other hand, they will be able to execute the processes for which they have been assigned the proper permissions. For example "Reconcile process" or "Request permissions", see the "Screen overview".
