Search in PAM recordings

Description

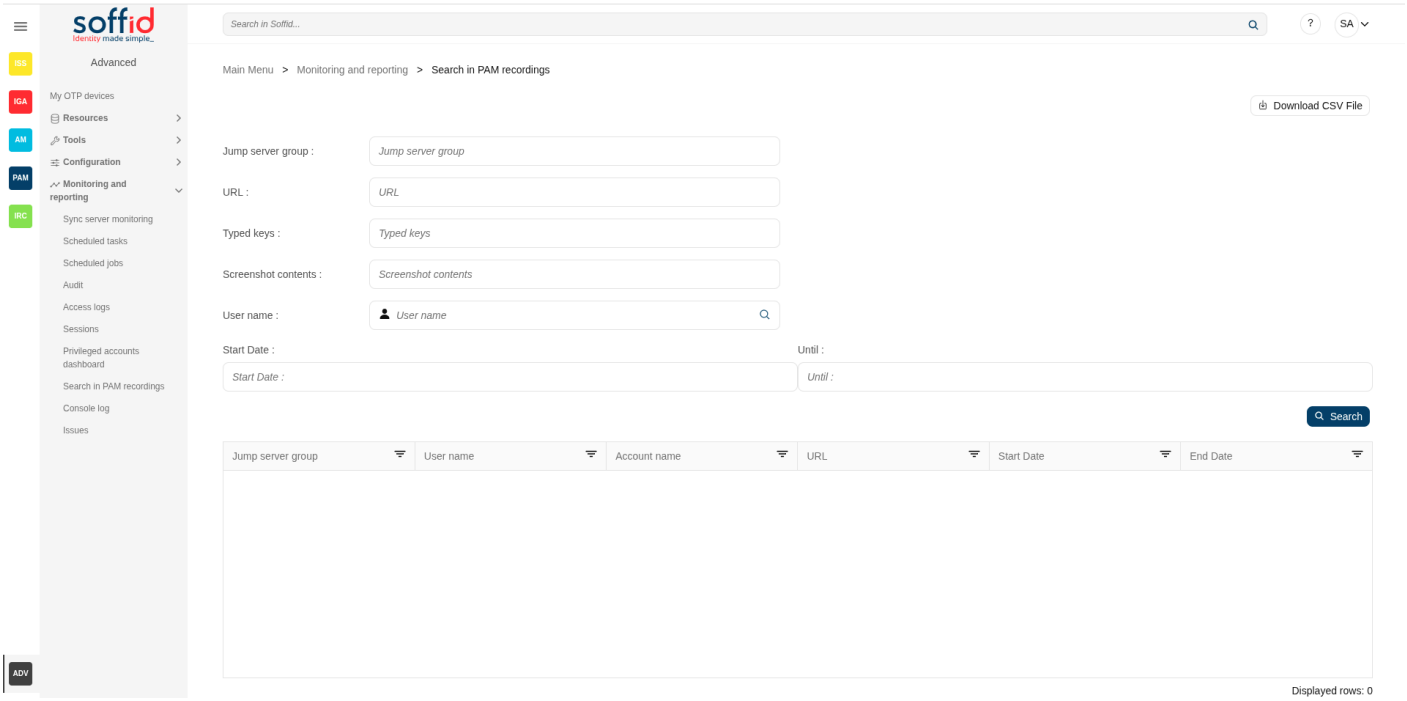

> Soffid provides the functionality that allows searching for information about the PAM recording sessions.

First of all, to query the PAM recording, you could apply some filters to refine your search. Then, when you click the Search button, Soffid will show you all the recording sessions that comply with the criteria specified.

If you click on one record, Soffid will show you a new page with all the data about the session and the recorded video. If you query with a typed keys filter, a bookmark with the minute and second will show, and it will allow you to go directly to that point and view the action.
