Getting started

What is Soffid Authenticator?

Soffid provides an application to be used with Soffid Identity Provider to obtain SSO and MFA for any web or legacy application.

It supports one-click push authentication for login.

> Please note that for push authentication to work in corporate environments, you must allow access to the following URL **https://push-otp-notifier.tools.soffid.net/**

Where can you find Soffid Authenticator?

Depending on your device, you can find Soffid Authenticator at the Google Play Store and Apple Store.

How to install Soffid Authenticator?

Installation

Download & Install

Depending on your device, you can download & install Soffid Authenticator Application from the Google Play Store or Apple Store.

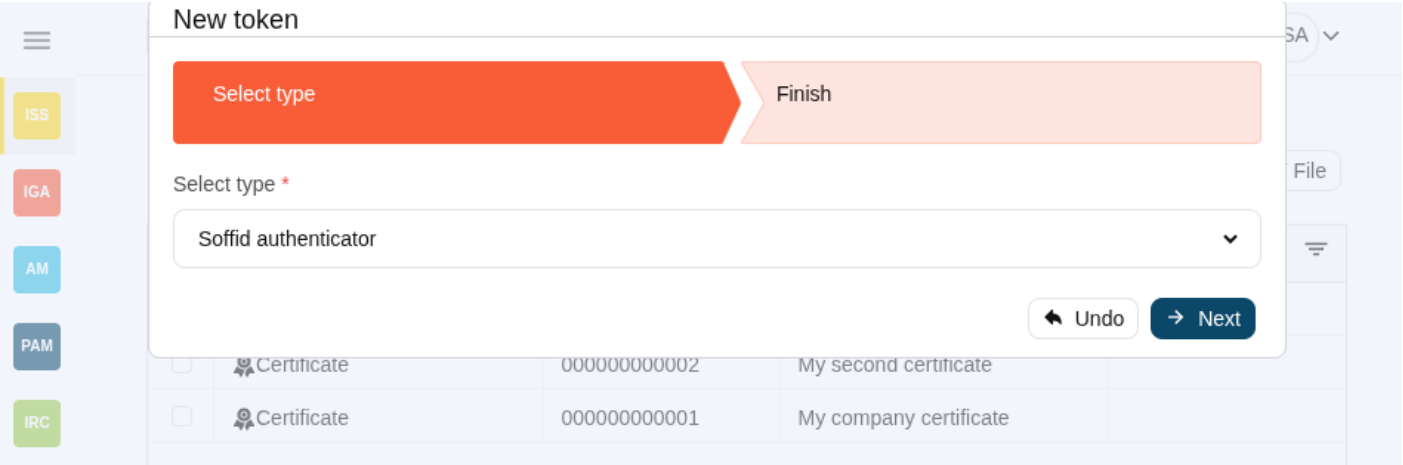

How to add Soffid Authenticator?

Steps to add Soffid Authenticator

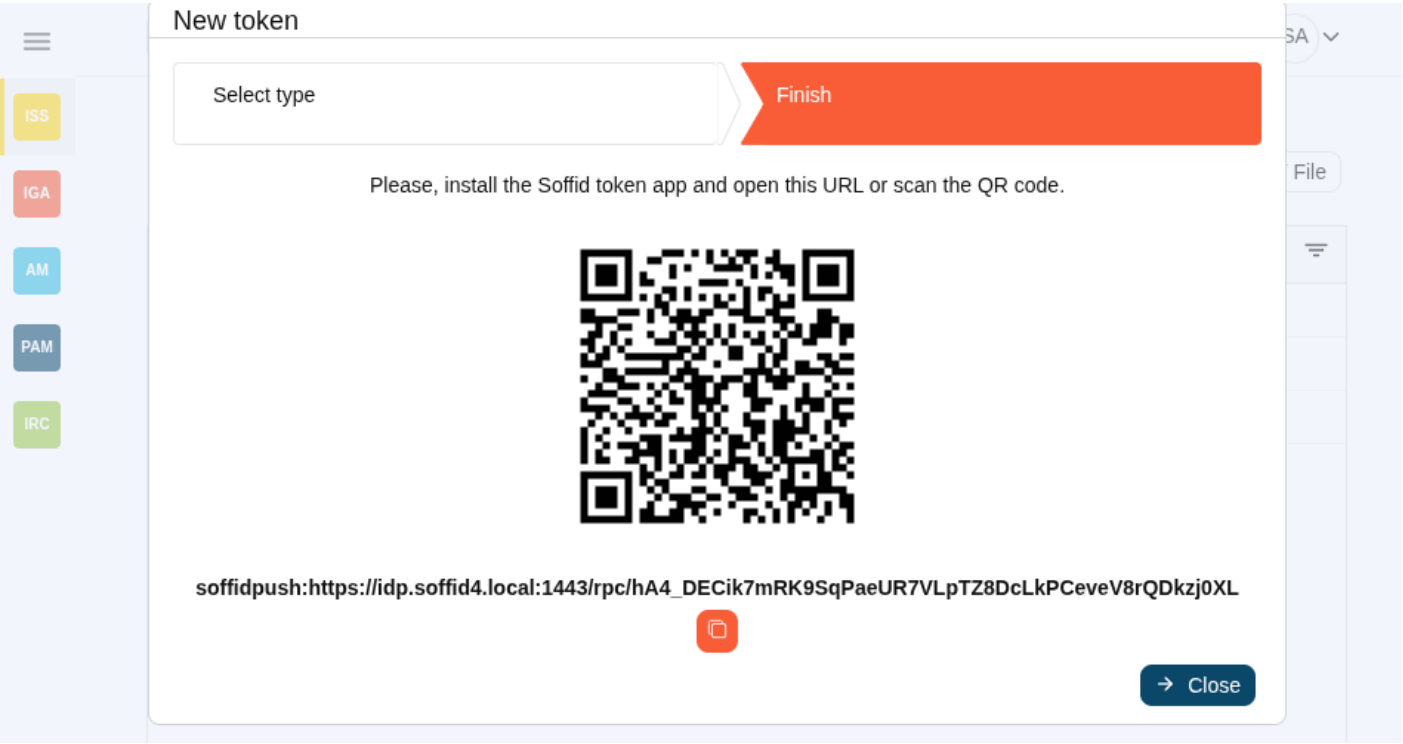

To obtain SSO and MFA for any web or legacy application, you need to add your Soffid Authenticator App.

1. First of all, you need to login into your Soffid Console and browse My certificates and FIDO tokens page.

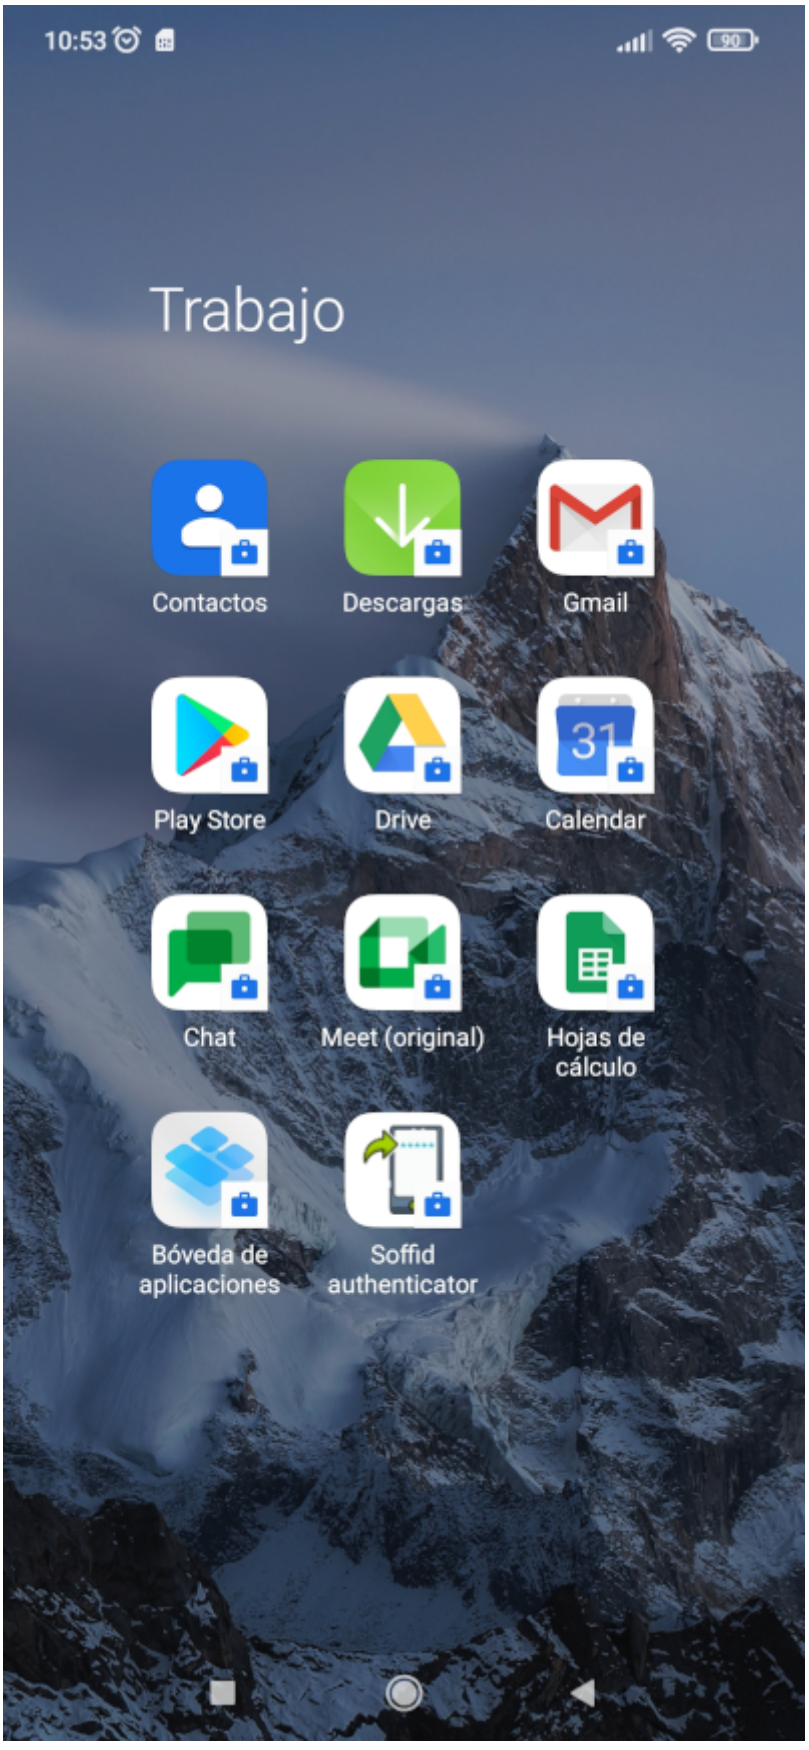

2. Second, you must add a new token. You need to click the Add button (+) and select Soffid Authenticator

3. Then, you must scan the QR with your device using the Soffid Authenticator App.

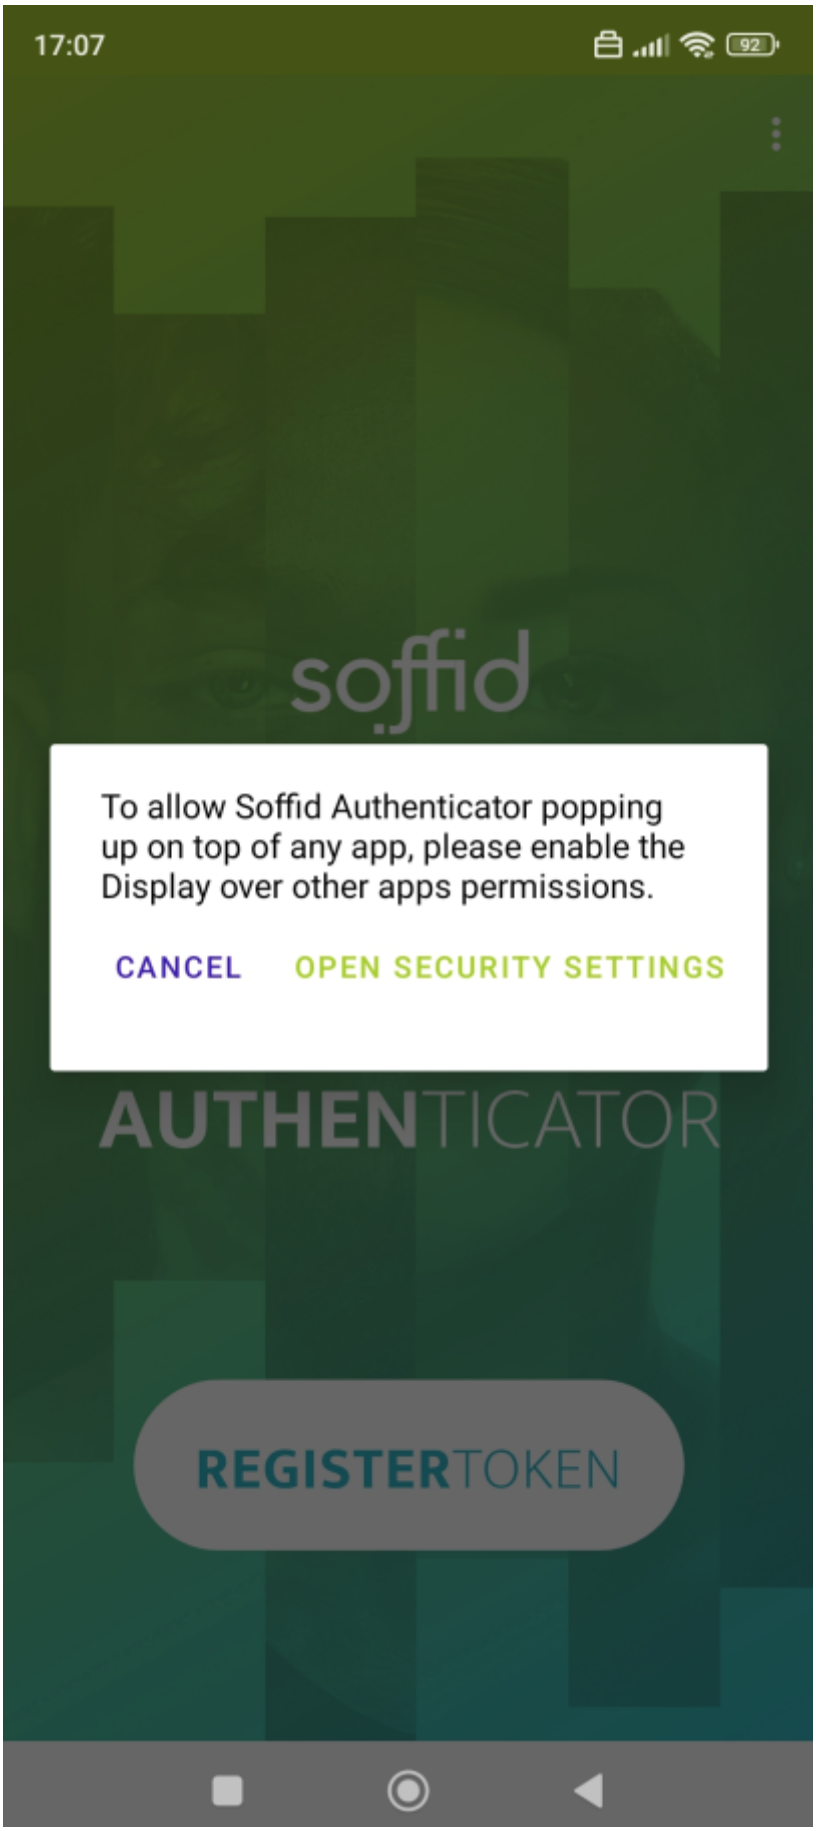

4. To scan this QR code, you must open the Soffid Authentication App on your device

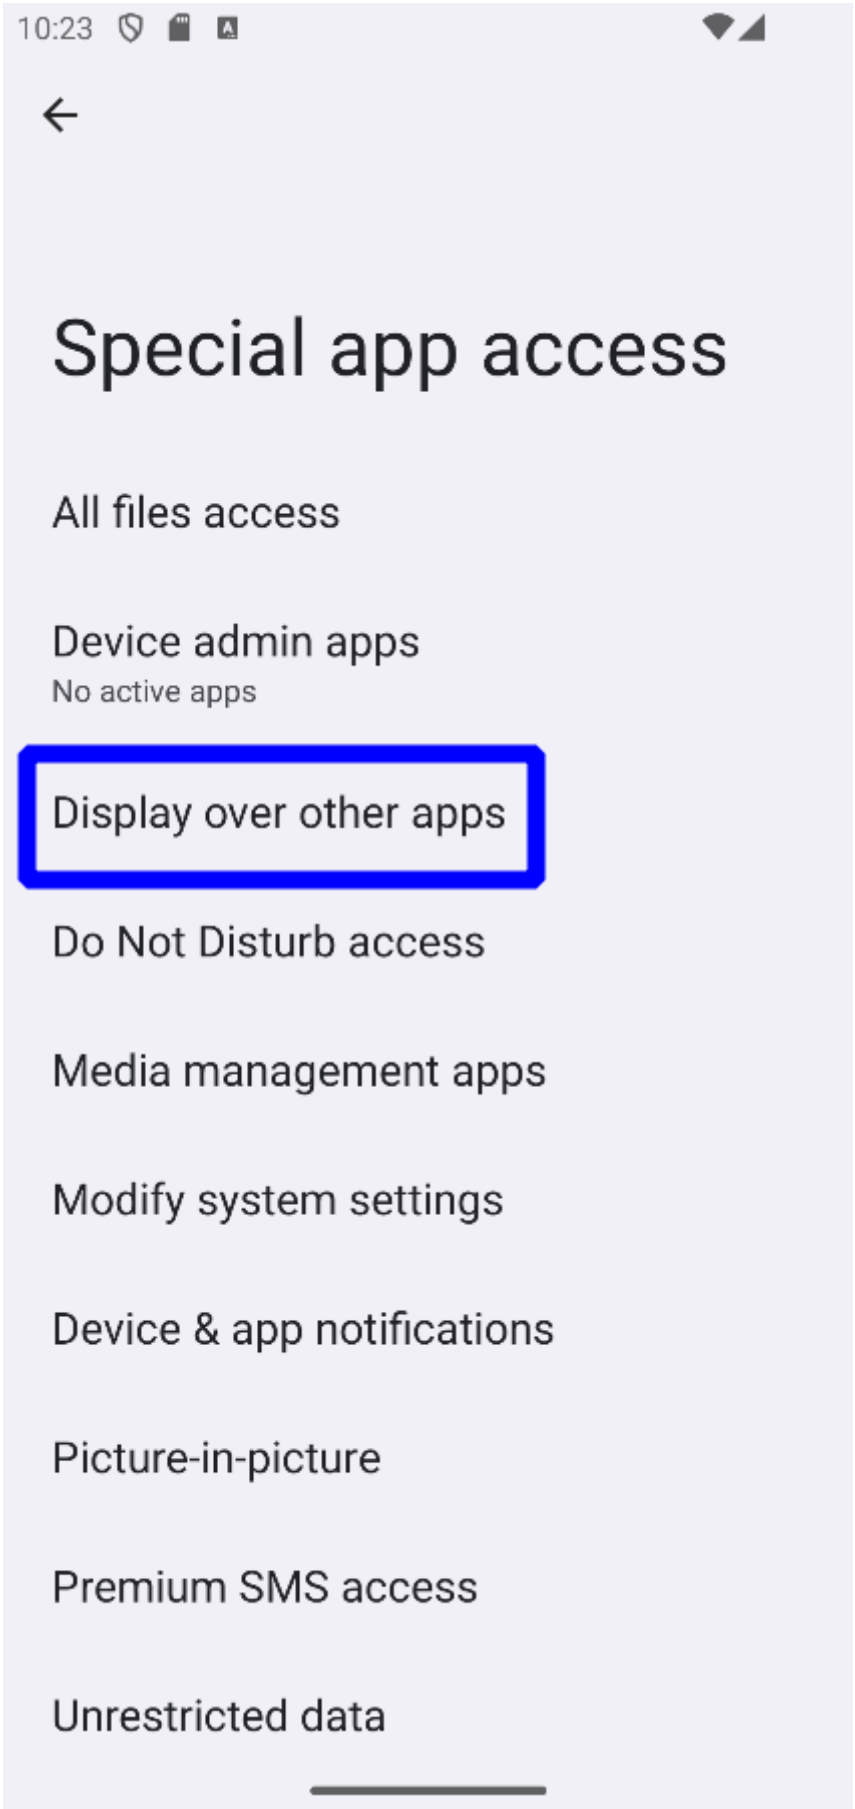

5. Then,

5.1. The first time you open the application, Soffid will ask you about displaying this app over other apps configuration
