EJB find handler: ejb-finder

Handles the method to retrieve business objects via a stateless session bean. Supports the following attributes:

Attribute	Usage
jndi	JNDI path to EJB Home interface
method	EJB Bean method to get business objects
if	EL expression that must be evaluated to true prior to handler action
unless	EL expression that must be evaluated to false prior to handler action

Additionally, it can specify one or more parameters in a way similar to the ejb-handler methods

ejb-finder example

```
<datanode name="country">
    ...
  <finder name="cities" type="city" >
    <ejb-finder jndi="com.soffid.sample/CitiesBean" method="findByCountry">
      <parameter value="${instance.abbreviation}"/>
    </ejb-finder>
  </finder>
    ...
</datanode>
```
