How to install WSSO for legacy app

Installation

In order to install Web Single Sign on, the following components must be installed and running

- Soffid IAM Console version 1.2.1 or later
- Soffid IAM Synchronization server 1.2.1 or later
- Soffid SAML Identity Provider version 1.0.0 or later
- An Apache server with Shibboleth Service Provider version 2.4 or later. The supported platforms are:
  - Red Hat 6.1
  - Ubuntu 12.04

On RedHat

Copy the library file **wsso-mod-apache.so** to modules directory /usr/lib64/httpd/modules

Add the following line to /etc/httpd/conf/httpd.conf

```
LoadModule soffid_module modules/mod_soffid_wsso.so
```

On Ubuntu

Copy the library file **wsso-mod-apache.so** to modules directory /usr/lib/apache/modules

Create the file /etc/apache2/mods-enabled/soffid-wsso.load

```
LoadModule soffid_module /usr/lib/apache2/modules/mod_soffid_wsso.so
```

Execute:

```
restorecon -Rv mod_soffidwsso.so
```
