Example Web PEP

Web Policy Enforcement Point

Use case example

We want to define a policy to restrict access to some pages of the Soffid console.

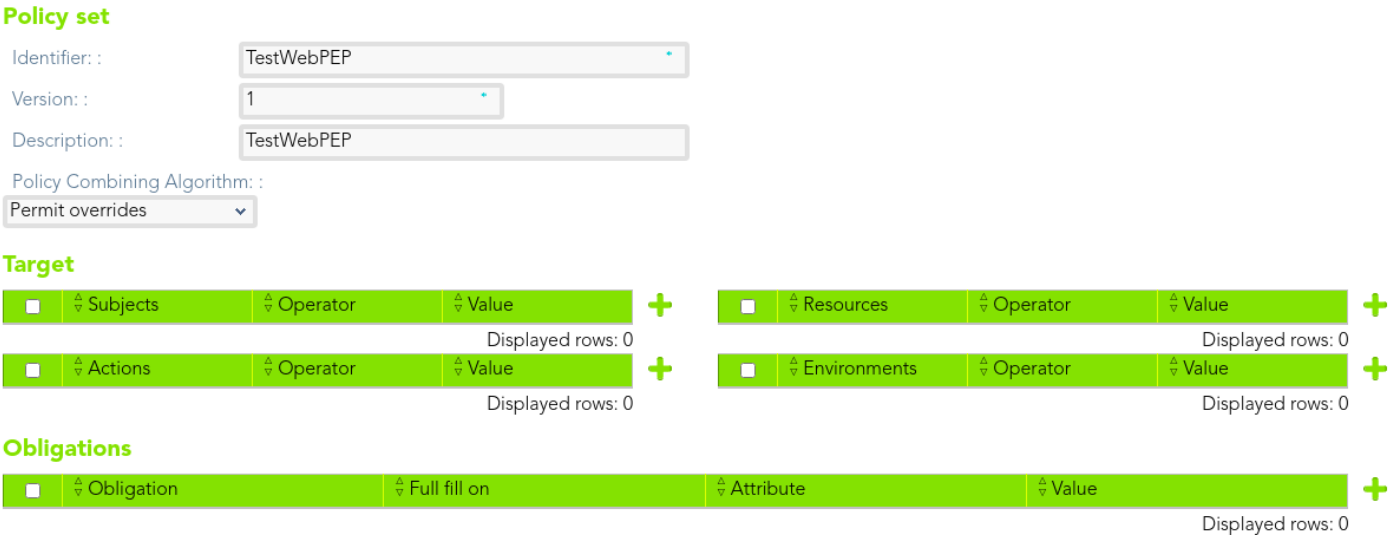

The users who are assigned to the SOFFID_RRHH role (from this point forward: end-users) will have limitations to access to some Soffid console pages:

1. The end-users who belong to the "enterprise" group as primary group, could not access to the groups page.
2. The end-users could not access to role page.
3. En other cases permit access.

XACML Editor

Policy set

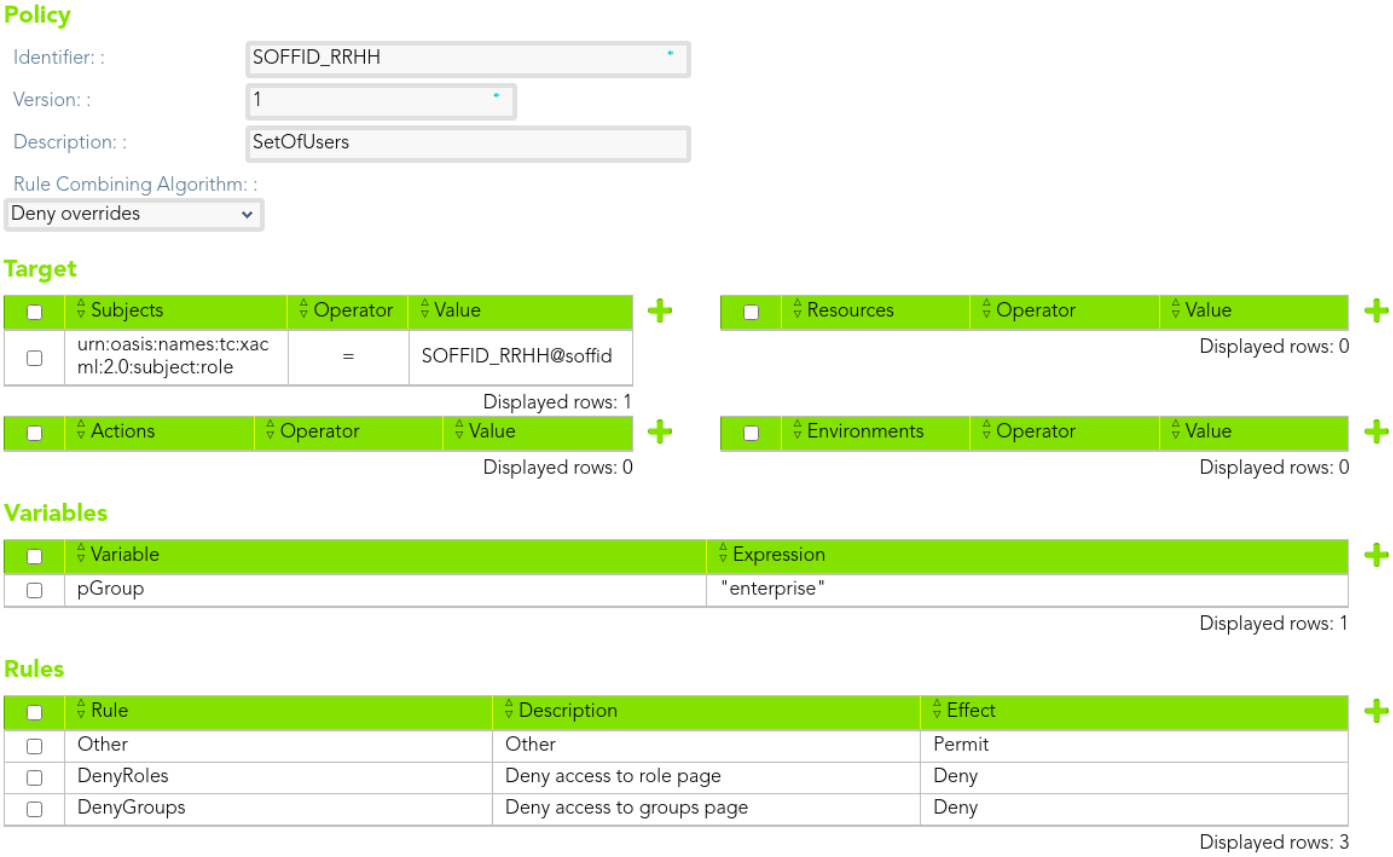

First of all, we define a policy set.

Policy

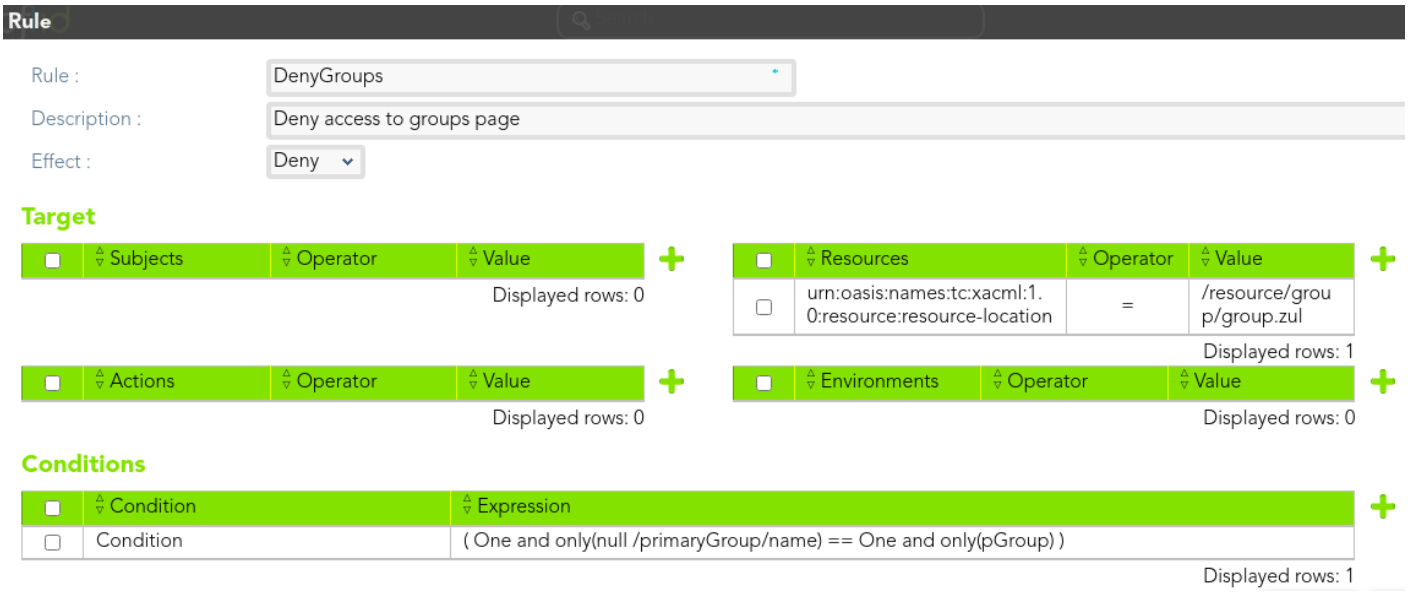

Then, we can define a policy to manage the access. We need to define the subject, in that case users with SOFFID_RRHH role assigned.

Also, we can define a variable that contains the group name to establish the restrictions.

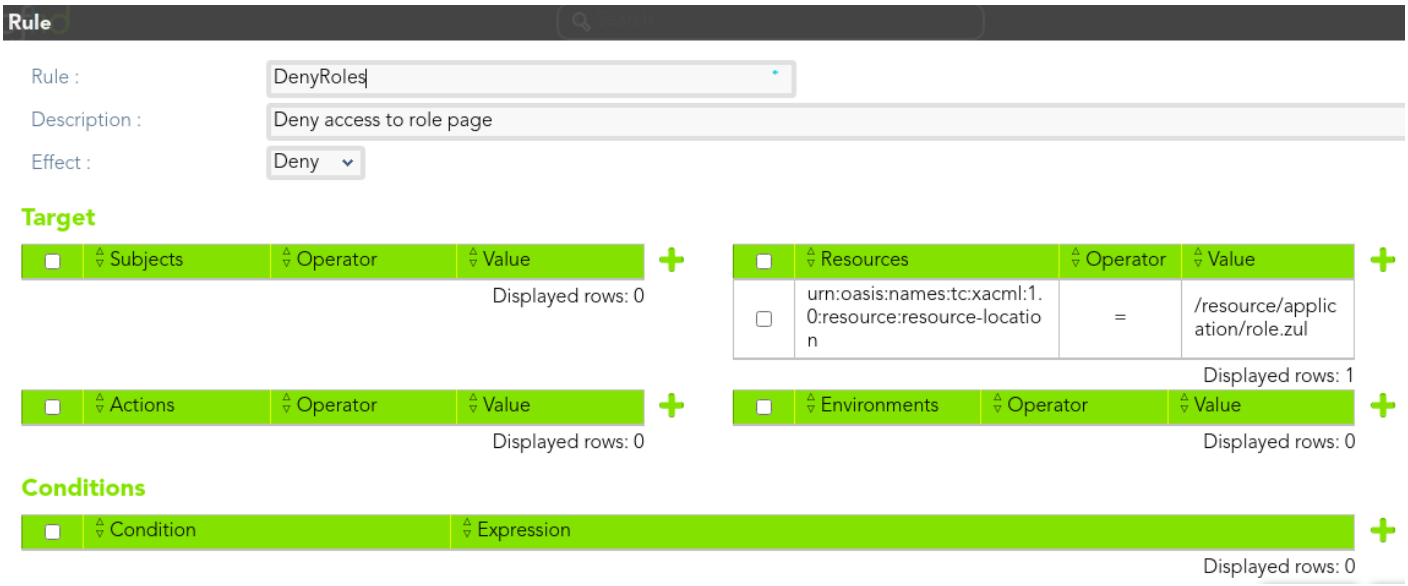

Rule 1

> The end-users who belong to the "enterprise" group as primary group, could not access to the groups page.

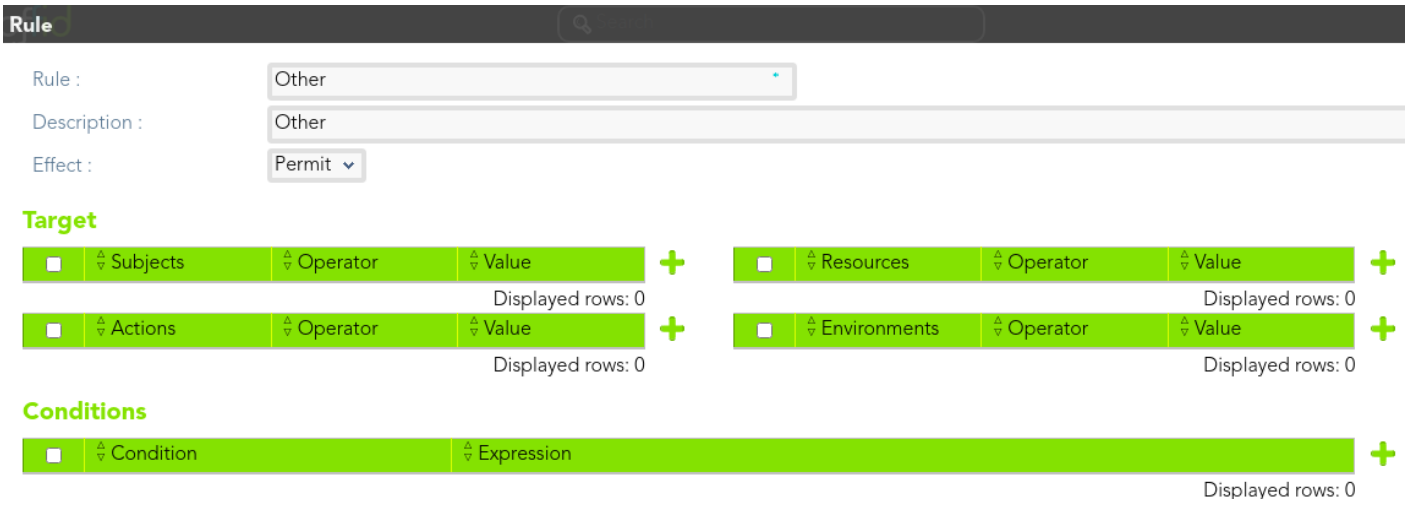

Rule 2

> The end-users could not access to role page.

Rule 3

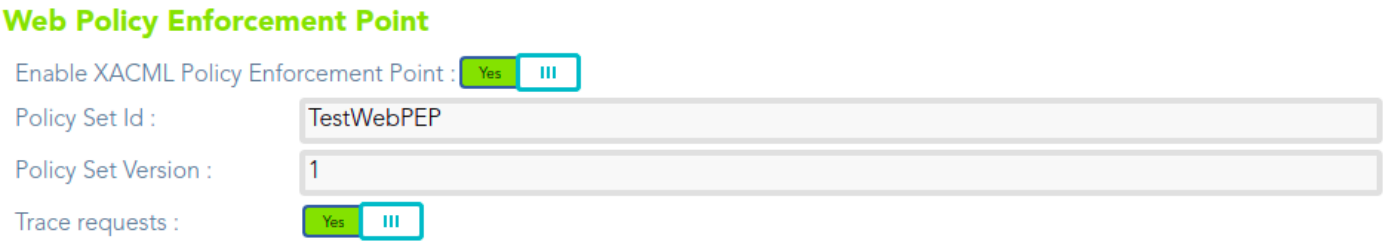

> En other cases permit access.
