

# Policy set

## Description

“ A **PolicySet** is a container that can hold other Policies or PolicySets, as well as references to policies found in remote locations.

- Policy Combining Algorithm
- Target
- Obligations

Every PolicySet contains a target and obligations, both can be empty.

The target contains the subjects, resources, actions and environments where the policy set will be applied. A target can contain more than one subject, environment, resource or action or none of them.

Policy Set can be exported to an XML file by clicking on Export button. The file will contain the Policy Set Target and all the elements included in it, like other PolicySets, Policies or References.

It is possible to create a new version for a PolicySet by clicking on 'Add new version'. That will copy all PolicySet elements on the tree with the following version number.
